M E D I C

A cover has been turned, a volume has been opened, and from the whimsical days of our youth we have crossed the threshold into a lifetime of service for our fellowmen. Gone are the care-free college days, and ahead lie years of persevering and sacrifice. For centuries past mankind has recorded the steps of his age. From the walls of caves to the world's fair "capsule", he has endeavored to recapture the essence of the original. In the pages that follow we have attempted to present the making of a physician in such a manner that whoever might chance upon our effort will better understand the story of medicine.

We Take You Through . . .

FOUR YEARS

O F M E D I C I N E . . .

WE CAME . . .

From 77 colleges and 13 states we arrived at the steps of Hahnemann. Whether journeys of hours or days, our destination was a common one. A life-long dream was unfolding in reality. On a torrid Monday evening we listened eagerly to the message from the administration. "We were a chosen few . . . devoted to life's most difficult study . . . many would fall by the wayside . . . become a slave to your books . . . meet your obligations . . . glorious achievement is yours . . . position, place, and honor await."

WE SAW . . .

For three years we sat under the discipline of medicine itself. No other hand could have held more firmly. Far into the night we meditated over formulas; bewildered, we tried to comprehend the autonomic nervous system; and with the oil burning low, we assured ourselves that pathology had us doomed. Suddenly we awakened only to find ourselves out of the classroom and into the clinics where we met the sick, and treated them in our own inimitable ways. We witnessed surgical technique at its finest. We saw life brought into the world, and watched death tighten its grim fingers around some ill-fated soul. So ended our stay.

WE CONQUERED . . .

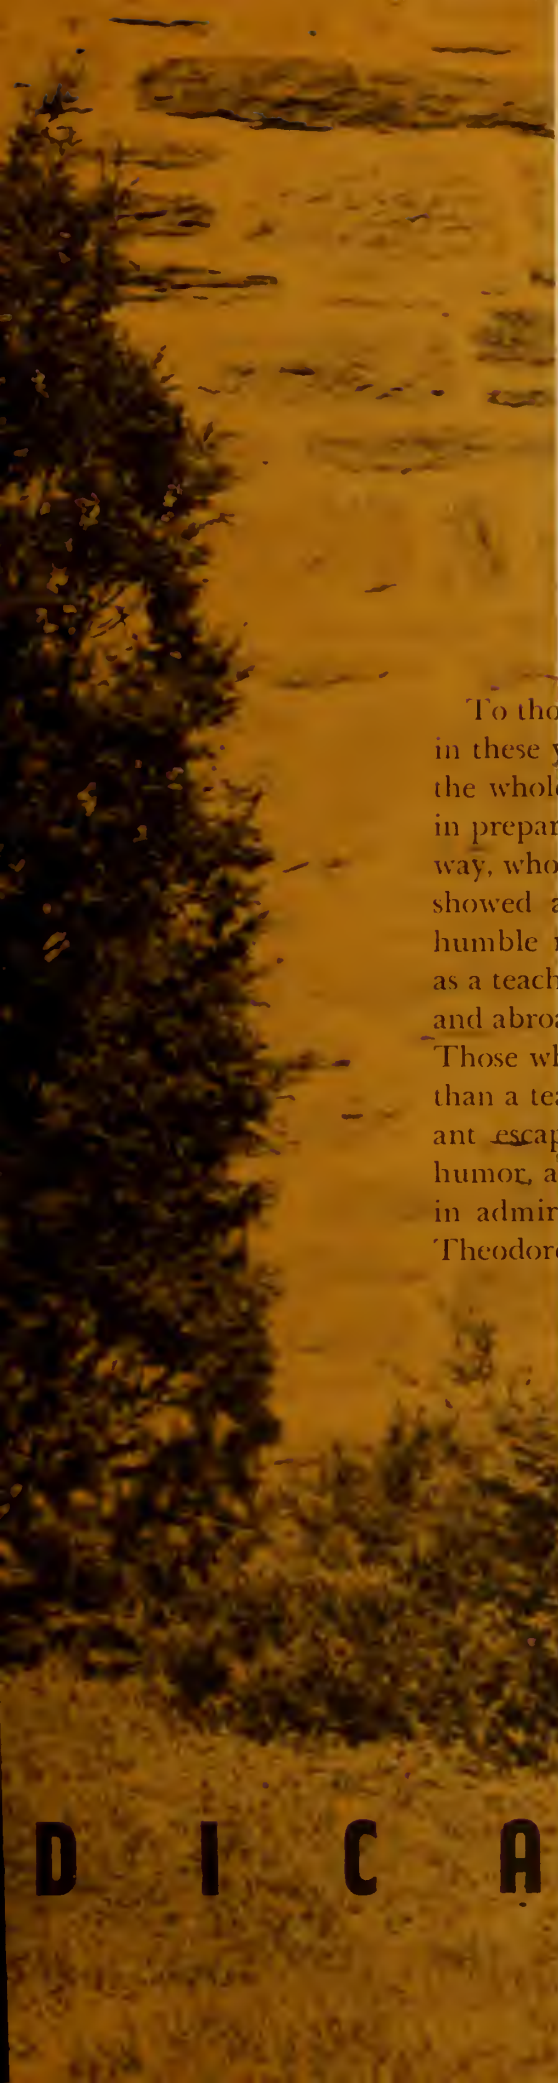

Over the horizon they came, like a swarm of Anopheles mosquitoes, their yellow bellies and red eyes gleaming in the blistering Pacific sun. Larger and larger they loomed, until even their slit-eyed glia cells could be seen, then from their proboscis they unloosed the thunder that was Pearl Harbor. We were but "college kids" then. Little did we realize that we were to be hurtled at blinding speed through the vast accumulation of material that is medicine. Nor did we ponder the thought that our class was to be the first to start and finish under the accelerated program. That was yesterday. But today has come. The goal has been reached, and we have conquered.

but first, we pause to dedicate . . .

THEODORE CARLTON GEARY

D E

To those on the benches engaged in the study of medicine, especially in these years of learning so much in the space of so little time, comes the wholesome appreciation of a man who helped us beyond measure in preparing for our life's work. To one who has gone more than half way, who has done a little more than "just enough," and above all, who showed an unselfish and sincere interest in the students, goes our humble recognition and gratitude. To enumerate his qualifications as a teacher of surgery, by way of advanced degrees and study both here and abroad, would be far from a complete summary of his effectiveness. Those who have come under his influence think of him as much more than a teacher. The hours in his clinic were memorable ones, a pleasant escape from the ramparts of showmanship. His dignity, good humor, and real understanding were an inspiration to all of us. Thus, in admiration and deep respect, we dedicate the MEDIC OF 1945 to Theodore C. Geary, M.D., F.A.C.S., F.I.C.S.

D I C A T I O N

. . . and then, our
saga began. We arrived . . .

WILLIAM G. SCHMIDT

ACTING DEAN

TO THE CLASS OF 1945:

"Nothing can bring you peace but yourself. Nothing can bring you peace but the triumph of principles". In this year of Victory you have come to a temporary resting place of satisfaction and achievement. Like the intrepid adventurer who has long clambered and toiled up the rugged ascent to reach a plateau of limitless vantage point you also have captured a vista of privileged opportunity and expanded service for the future. But, after a refreshing pause of contemplation and thought for the activities of tomorrow, your individual journeys through professional life must soon take divergent paths. Yet along all routes stand the infallible sign posts of wisdom, truth, and courage that will unerringly point the way to ultimate triumph and peace.

"The wise man has no perplexities, the true man has no sorrow, and the brave man has no fear".

My congratulations for your present achievements and my best wishes for all future undertakings go to every one of you.

Acting Dean.

CLARA C. FISHER

The first person we met upon our arrival at Hahnemann on that sultry July day was Miss Fisher. When she greeted us by name, told us where to find a room, and prescribed the necessary notes all in one breath—we were astounded. She was efficiency “plus” in the front office, with ready answers to innumerable questions. She knows more about draft boards than the man who made them, and can tell you two weeks ahead of time what will happen next. More than once she threatened to join the “Waves”, but after much supplication was convinced that it would have left the place in a jam, and has stayed on the job to supervise, to give counsel to the occupants of the front office, and to receive senators. Between times she found ready markets for her Sears-Roebuck catalogue in medical jurisprudence, and the like. Nothing displeased her quite so much as the early death of a hot rumor. Every official communique from the front office bore the initials C.C.F., and as long as they continue to do so, we’ll know that the wheels of the mill are still turning.

we registered . . . paid our fees . . .

One of our most pleasant associations at Hahnemann was with W.K.K. Every student came to know “Wally” as a friend; and in departing, the privilege of knowing him has greatly enriched our stay at Hahnemann. Through thick and thin he always stood by us—ready to tackle anything that might stand in our way. At the first red mark, “Wally” was quick to warn us of the danger ahead, and to point out the detour, “Work a little harder.” When the going was tough you could sense that “Wally” was distressed; although as often as not, a fierce scowl and a tongue-lashing were but a prelude to good news, for “Wally” had a sense of humor all his own. We soon learned to appreciate it. Even-tempered as a rule, about twice a year under the pressure of adding and subtracting grades “Wally” would fly into a rage if someone rubbed him the wrong way. Not one to bear a grudge, things were always calm and serene by the next day. The greatest tribute of the respect held for him is the volume of letters which pour into his office from Hahnemann men in the service. And even midst the tremendous pressure of a registrar’s duties, Wally finds time to answer them all personally.

WALLY K. KRATZ

How any one person can remember so much about so many books is still a mystery. We were seldom disappointed by not finding the book we wanted, whether we knew the title, the author, or merely which staff member had recommended it. And if perchance the book was not available, she always had a substitute that was even better than the original. Through her many years' experience as librarian she has developed a knowledge and familiarity of books that is of immeasurable assistance to the student. She always knew what each professor thought of a particular text, and frequently told us what books to buy and what ones were not so good. Her job both in the library and in the bookstore continued to run just as smoothly even after the Army and Navy complicated matters.

MRS. MELITTA TURNER

bought our books . . . and began to study . . .

Into the life of every student there come days, weeks, and even months when he feels the urgent necessity of seeking a respite from the constant drudgery of learning. Whether a "tot" with his letter blocks, or a bearded scholar of endless degrees, mental fatigue is yet a common enemy. In retrospect high school was a joke, and even college was a snap, but as new recruits in the field of medicine, life took on a more solemn hue. Though far from rested after just concluding our pre-medical work, we settled down to a more steady grind than ever before and began the study of the ills of mankind.

PHYSIOLOGY

JOHN C. SCOTT, A.B., PH.D.
*Professor and Head of the Department
of Physiology*

DEPARTMENT STAFF: J. F. McClendon; J. S. Hepburn; G.
D. Geckeler; L. V. Beck; H. Shapiro; N. C. Wheeler;
T. C. Barnes.

The Physiology department is the group that teaches us how the body works, why it works that way, and what would happen to us if it didn't. Ably headed by Dr. John C. Scott, this happy little staff of men is the Seigfried line of Hahnemann. Much can be said about "honest John", but, in a phrase, we can truthfully say, "He's good for Hahnemann!" Both a teacher and a student of Physiology, John Scott is firm in his convictions and is willing to stand up and defend them. Although difficult to know, he is very pleasant to talk to—after the freshman year.

Dr. McClendon is the mystery man of the department. He's seldom seen around the college, but all are aware of his presence owing to his abundant research and frequent publications. An authority on Thyroid Extract, Fluorite, Air Conditioning, to mention but a few of his many interests, Dr. McClendon frequently is his own best guinea pig.

DR. LYLE V. BECK

DR. NORMAN C. WHEELER

The instructors in our day were three in number: Drs. Norman C. Wheeler, Lyle V. Beck, and Herb Shapiro. The latter of the trio left us in order to do war work, and was replaced by the able Dr. Barnes—the man with the encephalogram. Dr. Wheeler, a regular guy and one of the boys, reminds us that there did exist a cheerful delirious for the stony chill that many knew as Physiology. A real friend of the student, he has often been mistaken for a freshman. Dr. Beck, a serious minded fellow, not too chummy and even somewhat seclusive, was well liked by the students for his encouragement and high grades on experiments. Dr. Beck, along with the rest of the members of the department, contributes to medicine through research.

The department of Physiology is without doubt the best organized in the college—which was recently attested to by a higher court of judgment than our own. Every phase of the work was well integrated so as to give the best possible preparation for the later work in clinical medicine. Partiality is non-existent; each student is on his own. Many of our finest “apple polishers” have turned on their best charms and finesse—only to be completely ignored. The end result is a better than average working knowledge of human physiology which is abreast of the most recent developments in the field.

DR. J. F. MCCLENDON

ANATOMY

THOMAS W. PHILLIPS, M.D.
*Professor and Head of the Department
of Anatomy*

Dr. Phillips is the head of the Anatomy department, and some of the best teachers in the college are members of his staff. Many are specialists in other fields as well as anatomy; they include surgeons, ophthalmologists, a gastro-enterologist, a pediatrician, an anthropologist. The facilities offered the students in this department are excellent, although a few less hands on each cadaver might make things more interesting. Dr. Phillips' lectures will long be remembered, and his affable personality even longer. Hardly a week went by that we didn't hear, "How's it going, men?", or, "Where's it come from, where's it go to, what's it do after it gets there?"

DEPARTMENT STAFF: T. M. Snyder; C. L. Schollenberger; R. Ricketts; M. F. Ashley-Montagu; H. P. Landis; H. Wastl; H. S. Warren; W. Y. Lee; L. Chunn; L. A. Frankel; N. A. Karakashian; P. D. Li Volsi; A. E. Pearce; S. S. Romagosa; L. Kirchofer; J. R. Noon.

DR. HERBERT S. WARREN

DR. C. J. SHOLLENBERGER

For contrast, anyone who had "Bloody Ashley" for laboratory won't forget him soon either. His corny jokes, stinging remarks and impossible questions made us even "greener" that we were. Though of national repute by virtue of his writings, it took us till our senior year to realize that he probably doesn't believe half what he expounds. As discontented and as confirmed a griper as he is, it seems strange that he sticks it out with us.

Dr. "Herby" Warren is the "jack-of-all-trades" in the department. His duties are many—from photographing anomalies to giving slide-quizzes in Histology. His face is a familiar one to all freshmen after a few days of school. In Dr. Angulo's lab we found a man who was sincerely interested in teaching all the anatomy possible in the time allotted. He was a real teacher and a hard worker. The war relieved the Anatomy Department of our Chinese friend, Livingston Chunn, and also Alex Pearce. Two surgeons, Drs. Sylvis and Schollenberger have only recently withdrawn from the teaching staff in Anatomy much to the regret of all.

DR. ANGULO

CHEMISTRY

WILLIAM A. PEARSON, PH.D., M.D., SC.D., LL.D.
*Professor and Head of the Department
of Chemistry*

DEPARTMENT STAFF: J. S. Hepburn; J. Chandler; N. Griffith; W. G. Schmidt; E. Hicks; P. Maas.

The Chemistry department is headed by Dr. William A. Pearson, the only man who could walk four miles during one lecture hour and at the same time ride on the rear platform of a caboose—counting the ties as he rode. He will be remembered always for his genial smile and friendly “Good Morning; nice to see you” for those who weren’t quite able to make “nine point, zero, zero.” This was our first exposure to medical teaching at Hahnemann. Little did we realize that hot July morning when we were introduced to the “Dean and his Troupe” that they would one day compete with a production called “Oklahoma”. Everything’s up to date on the third floor front? Who could have guessed that Indican would become the 49th state in the Union, and that heparin was named after one of the actors.

Among the unforgettables is Dr. Hepburn, the little man with the big brain. He is a walking encyclopedia of all types of knowledge. Aside from his professional activities, he is a great historian and a member of many societies. As his part in the war effort he has served faithfully as an aide-de-campe to Col. Ostrum.

DR. JOSEPH S. HEPBURN

DR. JOSEPH CHANDLER

Dr. Chandler was a faithful and noble army man to the very last. His efforts to teach us blood chemistry were not in vain, and doubtless our knowledge of the recipe for Nessler's reagent will enable us to save the lives of those mortally wounded on the battle fields.

Dr. Schmidt, the nugget king, in addition to teaching physical chemistry, was the dynamo of the department and a friend of the student to the last slide-rule.

Dr. Maas, you will recall, is the jolly guy, hardly ever seen without a smile or a good word. He's the man who has to do the dirty work such as make up solutions, check over experiments, help mark papers, say "yes" to Dr. Pearson, and a host of other things. He is liked by all who know him.

Now to get to the real brains of the outfit. We look around and whom do we spy—why, of course, Professor Hicks, the logarithm-happy pseudo-member of the department. He is no doubt the undiscovered genius of the college, the man with profound chemical ideas, the man whose definition of a protein startled the scientific world, and if you think we're kidding, just ask him.

Do you remember Jim? He was a nice old guy. He died on the job.

DR. PHILIP MAAS

HISTOLOGY AND EMBRYOLOGY

THOMAS M. SNYDER, M.D.
*Professor and Head of the Department
of Histology and Embryology*

"My advice to you is to pack your bag and go home." So began the medical careers of one hundred and fifty-odd embryo medics. The course lasted but a single semester, yet into that period was packed enough memoirs to last a lifetime. We were constantly ill at ease as to when the next exam would pop. The stooge system more than once acted as a fifth columnist Bund, and forewarned us of the days ahead, while the medial lemniscus and the superior colliculus pro-

vided the headache impulses. Although the department is greatly depleted from a teaching standpoint, the shape of a pig embryo is well-fixed in the formalin of our frontal lobes, even though we know little about cell structure. Better judgment restrained many an impulse to blow up, and then buy a train ticket, however not until later did we realize that Dr. Snyder was one faculty member who would become a real favorite.

exhausted from studies, we are rushed by the fraternities . . .

ALPHA EPSILON IOTA

OFFICERS

<i>President</i>	ELIZABETH EKEN
<i>Vice-President</i>	VIOLA WESLOCK
<i>Treasurer</i>	VERA MILANICK
<i>Recording Secretary</i>	VIRGINIA VAN DYKE
<i>Corresponding Secretary</i>	ELIZABETH BENFORD

The oldest national woman's medical fraternity, Alpha Epsilon Iota, established its 26th chapter, Alpha Beta, at Hahnemann. A small nucleus of eleven women students were initiated February 1945 at Women's Medical College of Philadelphia. Many activities included monthly dinner meetings, Christmas party, rushing party, pledge dinner, and a farewell banquet in honor of our graduating Senior member, Elizabeth Brown. With the pledging of six new members,

this past year has been an eventful one for Alpha Beta Chapter.

Alpha Epsilon Iota was founded in 1890 at the University of Michigan. The total enrollment to date is 2,289. Its purpose is to promote good fellowship and maintain a high order of scholarship and professional achievement. The fraternity looks forward to establishing the spirit of comradeship and service in the medical profession among themselves and those who are to come.

INTERFRATERNITY

FRATERNITIES REPRESENTED

Alpha Sigma

Phi Lambda Kappa

Phi Alpha Gamma

Pi Upsilon Rho

Phi Delta Epsilon

Theta Chi Alpha

In January 1944, a group of men representing the various fraternities at Hahnemann and feeling the need for an organization to bind more closely the fraternal spirit of the six active fraternities, founded the Interfraternity Council. The motive behind the organization is to foster fellowship, bring about better understanding, and promote a harmonious relationship among all fraternities at the school.

The Council is composed of twelve men, two from each fraternity, one a member of the Senior and the other a member of the Junior class. The officers of the Council are a president and a secretary-treasurer.

Though the Council has been in existence but a short time, it has successfully achieved most of its aims. The organization has weathered the storm concerning the election of class officers by adopting the policy of excluding all fraternity politics from the business of the Interfraternity Council. With this in mind, the Council conducted its second rushing season with complete success under the newly adopted system.

Prior to the next rushing season the Council shall have printed a pamphlet containing a brief history and statement of the ideals, aims, and accomplishments of each fraternity. An outline of the purpose of the Interfraternity Council and its constitution will also be recorded in the pamphlet. We believe it will serve as an invaluable aid to the Freshman in selecting the fraternity of his choice.

On December 9th, the Council sponsored the second Interfraternity Ball at the Ritz-Carlton Hotel. It was considered a greater success than the initial function and it is our hope that the subsequent Balls will continue to be the outstanding function of the social calendar at Hahnemann during the first semester.

The departing Senior representatives are the last of the charter members of the Council. They have formulated the plans and successfully carried the organization through its first two years of existence. It is the hope of all the members who replace them that they shall be capable of continuing the work for which this organization was founded.

Alpha Sigma Fraternity was founded by a group of students of the New York Homeopathic Medical College in 1893. Subsequently, nine other chapters were formed at various other medical colleges throughout the country. Beta Chapter was founded four years later by Hahnemann students. Since that time, Alpha Sigma has been continuously active at Hahnemann and now boasts a large number of members among the faculty as well as hundreds among the graduates. Student membership at present includes nearly one hundred brothers.

Activities of the fraternity include business meetings, monthly dinner meetings, several dances, and an annual smoker.

Those of the medical profession recognize probably more than any other group, the necessity for intimate social relationship in the fostering of man's hopes, ideals, and inspirations. Thus, we of Alpha Sigma hold this relationship as basic in the importance of our fraternity and we believe that by its virtue we shall be aided much in our efforts to become physicians well worthy of our profession.

OFFICERS

ROLFE A. HECK		<i>President</i>
WILBUR JEHL		<i>Vice-President</i>
JOHN MILBURN		<i>Secretary</i>
CHARLES WALKER		<i>Treasurer</i>

On March 25, 1894, a group of medical students at New York Medical College banded together and laid the foundation for what is one of the oldest medical fraternities in America today. In January, 1897, Gamma Chapter was chartered at Hahnemann and since that day its members have promoted an understanding of medical fraternalism between its members throughout the civilian and military world. This has been accomplished at Hahnemann through our regular monthly dinner meetings at which time one of our alumni members from the faculty provides us with thought of current medical interest.

Our social aims are also important in strengthening our group. The Annual Rushing Banquet at the Ritz-Carlton Hotel this year introduced us to a fine Freshman group from which we chose a pledge class to bring our chapter membership to over the hundred mark. These pledges were initiated before the National Convention which met at the Warwick Hotel last November. Several dances were held and other chapter activities included Founder's Day in March at which time we celebrated our founding and honored the outgoing Seniors—a befitting climax to four years of fellowship in Phi Alpha Gamma.

The Phi Delta Epsilon Medical Fraternity was founded October 13, 1904 at the Cornell University School of Medicine. Its aim then, as now, was to bring about a greater solidarity among medical men by promoting social and scientific endeavor. Today in fifty-nine schools our Fraters are all working toward the same goal—medicine and its mastery.

The Hahnemann Chapter (Beta Zeta) of the

Phi Delta Epsilon Fraternity was organized March 8, 1929 and consisted of only ten men. In the selection of new members, a high scholastic record, true medical interest, and personal attributes necessary for a physician, play a role.

Scientific meetings are held monthly and various phases of medicine are discussed by outstanding men in the various field; yet, there is time for revelry, for there are many dances, dinners and informal get-togethers.

OFFICERS

MARVIN S. GREENBERG.....*Superior*
 EDWIN J. POWELL.....*Vice-Superior*
 EDWARD B. WEISMAN.....*Secretary*
 REUBEN BLOCK.....*Treasurer*

Seventeen years ago a group of Hahnemann men realized the need for another organization which would foster friendship, mercy, truth, and fidelity. These men got together, organized, and elected William Klinman as their First Superior. Their aims were to foster and maintain a spirit of fraternalism and of mutual aid and moral support, to promote and advance the concepts of the medical sciences, to instill and maintain a love for and a loyalty to Alma Mater and its ideals, and to inculcate such ideals as will result

in actions worthy of the highest precepts of human endeavor.

Our activities include scientific meetings with guest and frater lecturers, discussion groups, competitive research and literary projects, financial and scholastic aid, and, of course, on the social side, several large interchapter dances and banquets every year and many smaller intrachapter socials. But our main activity is not expressed in any action, but rather in the cultivation of the prime fruit of any good fraternity, namely, fraternalism.

Representing one of the more active social groups at Hahnemann, Pi Upsilon Rho has the distinction of being the oldest national medical fraternity in the United States or Europe, being founded on the campus of the University of Chicago in 1876 by Dr. F. A. Rocky. The local chapter, Vertebra Quarta, was founded in 1902. Recently, the fraternity has become an international organization with the founding of a chapter in Mexico City by our own Dr. Seidel.

Among our numerous accomplishments during the past year was the strengthening of the bonds of fraternalism between our active alumni chapter and the undergraduate group. This has brought about a better understanding and a closer relationship between alumnus and student.

The undergraduate chapter has an active membership of approximately ninety members, headed by Encephalon Eugene M. Labowskie, under whose leadership the fraternity has risen to new heights.

Theta Chi Alpha is the newest fraternity at Hahnemann having been organized in the spring of 1944. Formerly, it was known as the Lambda Phi Mu Medical Fraternity which was founded at Cornell University Medical College in 1920. Membership to the Lambda Phi Mu was limited to students of Latin descent which made it a sectarian group. Realizing the shortcomings of such a fraternity, its members resolved to make it non-sectarian. To accomplish this, however, a new constitution had to be drawn and a new name adopted. Thus, under the name of Theta Chi Alpha, the new fraternity emerged as a non-sectarian group with the prerequisites of other medical fraternities within the college. Theta symbolizes Truth; Chi symbolizes Constancy; and Alpha designates the First Chapter of the new fraternity.

Theta Chi Alpha holds its business meetings every third Wednesday of the month. A social affair is sponsored once a month so that its members may gather for an evening of fun and relaxation. These socials may be in the form of an evening of bowling, a fraternity dance, closed dinner meetings high-lighted by a prominent speaker, or smokers whereby its brothers can become better acquainted and exchange experiences.

The Annual Rushing Banquet opens the social calendar each year and the Fraternity Dinner Dance concludes it.

Theta Chi Alpha will maintain the old standards of scholarship and fellowship, but now it will be a non-sectarian group. Although it is small, its members enjoy a brotherly friendship and cooperate to help make Hahnemann graduates better doctors.

PREVENTIVE MEDICINE AND PUBLIC HEALTH SEMINAR

The Seminar of Preventive Medicine and Public Health is a student scientific society which functions under the sponsorship of Dr. H. S. Cook and Dr. I. Gratch. The aim of the seminar is to stimulate interest in preventive medicine, public health, and allied branches of medical science. Membership is open to all interested Seniors, Juniors, and second-semester Sophomores. Attendance is open to all students

OFFICERS

Vice-President.....MARGARET J. GIANINNI
Secretary-Treasurer.....THOMAS M. COLOMBO

whether members or not. Meetings are held every Friday at five. A problem is discussed, a student speaker usually presents a paper following which the subject is reviewed with the help of the sponsors. The best papers are published. During the current scholastic year papers have been presented on Brucellosis, Bacillary Dysentery, Penicillin Allergy, Blood Globulins, Influenza, etc. The active membership is made up of students who have attended at least seventy-five per cent of the meetings and presented one acceptable paper. Upon graduating they receive a diploma and a key.

WOMEN'S MEDICAL SOCIETY

OFFICERS

<i>President</i>	MARY DeMEDIO
<i>Vice-President</i>	NORMA SPIELMAN
<i>Secretary</i>	MARGARET W. CIEPKO
<i>Treasurer</i>	MARY THOMAS

The Women's Medical Society was organized in 1942. It has fulfilled a need for an organization which would not only promote friendship and cooperation among the women of the college, but also give them a voice in matters which concerned all students. To this end the Student Institute has granted the President of the Society membership on the Council.

On the first day of each school year, a luncheon is held for the incoming women at a prominent hotel or restaurant. An effort is made at this time to anticipate the problems and difficulties a first year student might encounter. An

annual Banquet featuring a prominent member of the profession is part of our program. This year Dr. Catherine MacFarland, well known for her research in cancer, spoke on the importance of cancer prevention. Dr. Stanley Reimann, and Dr. and Mrs. Eberhard were other guests.

The social program is brought to a close with a farewell party for the graduating women. The Women's Medical Society is open to all women of the college and is supported by dues which are kept at a minimum. An official design for pins has been selected and all members are entitled to wear them.

AESCULAPIUS SOCIETY

OFFICERS

President THOMAS S. CRETELLA
Vice-President ROLFE A. HECK
Secretary-Treasurer JACK M. ZELUFF
Sponsor DR. THOMAS M. SNYDER

Away back in April of 1913, Dr. "Tom" suddenly was inspired by all of his books, by all of the pictures hanging along his hallway, and perhaps by the rich tradition of his long-holding of the famous Dr. Weaver's desk. Sitting at that hallowed desk one day, with all of his typical outspoken manner, he bellowed, "I'm going to organize a history club!—Where's that Senior class roll, and where's the roll sheets of the other classes."

Seriously, Dr. Snyder had given much thought to bringing together a group of students whose common interests in the development of medicine would fill a book in the far medical program of today. For many years Dr. Snyder spoke of such an undertaking to Dr. Russell Fisher. He finally approached the following charter members about the idea: Bill McIntyre, Bill Stewart, Dick Oakley, Ralph Graham and Bill O'Brien of the Senior Class; Bill Souder, John Duey, Charles McCutcheon, and Al Barriero of the Junior class; Mike Brignola, Tom Cretella, Hugh Mathews, and Frank Nagle of the Sophomore class.

At our first meeting in the Histology office, we decided to bring an additional member per man, and elected Bill Stewart president, and Souder secretary-treasurer. We made Dr. Russell Fisher our honorary faculty member, who presented a formal thesis at our first dinner meeting. Each new member reads a paper at one of the

meetings during the year. The membership of the club is now made up of twelve from each class.

The club has invited various members of Hahnemann's faculty to tell us of their particular interest in the History of Medicine. Dr. Snyder told us why he picked the name Aesculapius, it being the favorite of "learned physicians." Dr. Scott spoke to us on how Michael Servetus and later Harvey came upon the circulation of blood; Dr. Campbell spoke on "The Romance of Renal Lithiasis"; Dr. Lee about that great Irishman whose family came to plant potatoes and who produced one of America's greatest surgeons, Dr. Murphy of Chicago. Dr. Lafferty gave a talk on the "Romance of a Delivery." Dr. Nagle told us about recent advances in Ophthalmology. Dr. Geary spoke on Hippocrates and the worthy tradition which modern medical students must learn for dutiful respect. A history of the feeding of infants was given by Dr. Noon, and recent advances in blood chemistry were discussed by Dr. Horneff. At the last meeting of the year Dr. Richard Shryock, Professor of History at the University, and author of a "History of Medicine," spoke. The active participation of the student members is a real treat to Dr. Snyder. In retrospect, due credit should be given to Ralph Graham and Bill O'Brien for their excellent description of the History of Anesthesia—without use of notes or outlines.

GLEE CLUB

OFFICERS

Conductor.....ROBERT B. DORSEN
Manager.....REX DAUPHIN
Librarian JOHN STEWART
Sponsors.....DRS. COOK AND RICKETTS

The Hahnemann Medical College Glee Club, now under the able conduction of Robert B. Dorsen, is unique in that it is probably the only Medical College Glee Club in the country. Dr. Morris Golden, Class of 1899, later Professor of Medicine, and William R. Williams, Class of 1903, later Clinical Professor of Anatomy at Columbia's College of Physicians and Surgeons and a well known authority on Orthopedics wrote the official Hahnemann song. Dr. Gilbert Palen, former president of the State Homeopathic Society and later Professor of Otology at Hahnemann wrote the words.

Dr. Ruth, nationally known authority on anesthesia, conducted the club from 1918 to 1923. Dr. Cook, Professor of Preventive Medicine and

Public Health, accompanied the club in 1925 and is now co-sponsor along with Dr. Ricketts. Dr. Ricketts directed the club until 1927. Other members of the faculty who formerly sang with the group are Drs. Russ and Ted Geary, Hunter, Hunsicker, Campbell, Ludwick, and Paul Kistler.

The club this year auspiciously began its program with Christmas Carols in the auditorium. Later it sang a concert at the Stage Door Canteen. Other concerts included the Philadelphia Naval Hospital, Valley Forge Army Hospital, and songs at the Blue and Gold. This year, for the first time, saw the addition of 16 young ladies to what has always been a male organization only.

NEWMAN CLUB

OFFICERS

<i>President</i>	JOSEPH M. SCORNAVACCHI
<i>Vice-President</i>	HARRY J. GLAH, JR.
<i>Secretary</i>	LOUIS A. WESLOWSKI
<i>Treasurer</i>	JOSEPH E. TOMASHEFSKI

REV. JAMES C. McERLANE

The Newman Club at Hahnemann has been in existence for many years. Since about one third of the student body is composed of Catholics, the need for this organization is well understood. It is dedicated to the cause of clean speech, and especially to reverence for the Sacred Name of our Savior. Unlike most organizations at Hahnemann, the activities of the Newman Club are largely confined to those of a spiritual nature. This is because other college activities amply take care of the social needs of the students, so that this responsibility does not devolve on the Newman Club. The monthly meetings of this group are a constant reminder to its members of their religious obligations.

It is a well-known fact that society without religion cannot exist. Justice, charity, and cooperation are the guiding principles rather than injustice, hatred and enmity.

If the individuals who govern society and those who are governed would accept wholeheartedly this attitude toward their fellowmen, society would have a wholesome constitution, free from the constant wrangling and bickering which accompanies a vicious attitude toward one's neighbor. Those who possess authority have received it from God; those whose lot it is to obey, owe obedience to authority in God's name.

The Newman Club members accept these truths and it is the purpose of these individuals to carry these beliefs in their work as future doctors.

Under the capable guidance of Rev. James C. McErlane, the Newman Club has tried to foster the Catholic ideal—"Love of God, and Love of Neighbor". May we be ever mindful of this and also aware of the fact that society without Faith cannot exist.

OMNIA AD MAJOREM DEI GLORIAM

Remembering well

The new school year opened officially on October 2, 1944, with Dr. Pearson delivering the address. During that week it became known that the Freshman Class, with the new students added to the Sub-Freshmen, was one of the largest classes ever admitted. The difficulties arising from such a large number of students were temporarily surmounted by forming groups among the members of the class in accordance with a plan formulated by Dean Schmidt, who further made it known that a definite number of Freshmen would have to be dismissed from the college at the end of the first semester in order to reduce the number to an optimum. During tense and trying moments Dr. Schmidt reiterated that this elimination would be placed on the basis of merit, shortly whereafter he introduced his scheme for arriving at a student's general average on a weight system.

The most recent addition to the class were strangers not only to one another, but also to the former Sub-Freshmen who had some opportunity to establish friendships during the summer. It was this state of affairs which divided

the class when election of officers came about. Many wanted to hold elections immediately, and others wanted to wait until they were better acquainted. For the latter group, Senator Boyd filibustered, fumed and fought, but eventually lost his fight. After a "hectic" campaign and dramatic "political set-ups", the class once again chose President Conrad as their leader, the Sub-Freshmen not forgetting his excellent performance during the summer. Having done with things political, the new medical students settled to their task which they found to be an extremely arduous one, so much in fact, that many dropped by the wayside. The load became all the heavier during the fourteen examinations during the month of January. After one day of vacation, the class began the second semester. Shortly thereafter, the Dean, true to his word, announced the names of seven members to be dropped from the class. Many others were placed on the probation list. From that day on the class studied more earnestly than ever, and with apprehension worked toward the day when they too might repeat the Hippocratic Oath.

The early history of the Freshman Class, the Class of 1948, has been an unusual one, indeed. It began in this wise, that early in 1944 the Federal Government unexpectedly ruled that Medical Schools admit their new classes in June of that year. October, the intended month of opening for practically all the nation's medical schools, thereby fell beyond the Government's limit. To meet this sudden change in policy, the schools arranged to admit a large portion of their new classes by June 30th.

The courses pursued by this early group extended through eight weeks and included organic chemistry, by Dr. Chandler; Quantitative Analysis by Dr. Pearson; Physical Chemistry and Chemical Arithmetic by Dr. Schmidt; and a most enlightening esthetic and logical presentation of Anthropology by Dr. Ashley-Montagu.

our freshman year . . .

Inasmuch as to fit into Hahnemann life, the premature Class, officially dubbed "the Sub-Freshmen Class", chose Harold Conrad as its President protempore. Although few Sub-Freshmen knew President Conrad, except by his towering stature, each and all were to acknowledge his excellent fulfillment of the office to which he had been chosen. The Sub-Freshmen labored through the heat of July and August, the main difficulty of those unfamiliar with this climate being the extreme humidity. After final examinations many from outside of Philadelphia departed for home, which in more than a few cases was hundreds of miles distant.

CLASS OF NINETEEN FORTY EIGHT

. . . having weathered the fury of the freshman courses, we breathed deeply . . . then plunged suddenly into . . .

Behind us lay the barren fields, ahead the vaulting cliffs. The final examinations were over, and fortune had dealt with us lightly. Into our ranks had reached the sinister hand of fate, and drawn unto herself those chosen few for whom she had plans other than medicine. Vacations were long since forgotten, and our rest was measured in days. Re-exams cared for our casualties, as we gathered our forces and re-organized to face the most dreaded year of the four. We had been informed that a mysterious "they" were out to get us, so armed with an eight pound Boyd, and a thirty-millimeter Kolmer and Tuft, we pushed forward to our next encounter.

SOPHOMORE YEAR...

Our dedicatee in one of his leisure moments

. . . forewarned by the upperclassmen,
we moved with trepidation as we began the study of . . .

SAMUEL W. SAPPINGTON, M.D., Sc.D., F.A.C.P.
*Professor and Head of the Department
of Pathology*

PATHOLOGY AND BACTERIOLOGY

Dr. Sappington is an excellent pathologist . . . Other members of the department include Drs. Cook, Barthmaier, and Horneff. Dr. Hunter S. Cook has borne with a smile the tremendous burden of extra duties cast upon him by the departure of Dr. Grant Favorite. Though Dr. Favorite had much to do with our knowledge of Clinical Pathology, the classes which have followed have been ably taught by Dr. Cook. With the onset of the war Dr. Barthmaier was the first to get into the swing of things by donning his uniform. With his turned-up collar and brisk step, he was frequently mistaken for one of the Barrymores. Nearing the end of our work in Clinical Pathology Dr. Horneff joined the department and has helped to lighten the teaching burden considerably.

DEPARTMENT STAFF: H. Russell Fisher; O. F. Barthmaier; H. S. Cook; J. A. Horneff; T. M. Snyder; H. D. Lafferty; E. H. Dickinson; H. S. Ivory; E. D. Sharpless; J. W. Smith.

It was our good fortune to have completed our work in pathology under Dr. Fisher just prior to his leaving to take up a special assignment with the Medical Corps of the United States Navy. Having been on leave of absence from the faculty for over a year, during which time he has been stationed in China and the Far East, he has recently been returned to the United States owing to ill-health. However, he is speedily convalescing. His absence from the college has been keenly felt by his colleagues and students alike. It is our earnest hope that an early end to hostilities will permit those who come after us at Hahnemann to share the privilege of learning under an inspiring teacher. If, at times, he seemed a little conscious of his mental endowment (and justly so), Dr. Fisher proved himself no mere lip-server to the dictum, "Noblesse Oblige". Few have gone to such painstaking efforts as he has in the presentation of things medical. It can truthfully be said that an audience to one of his buoyant lectures was often disappointed when the bell rang announcing the end of the hour. As a lecturer with unerring flair for the fitting word, he presented difficult pathological material in such a way as to stimulate thought and stir the imagination. And so it was that, under Dr. Fisher's teaching personality, many of us experienced for the first time a certain satisfaction in the acquisition of medical knowledge. Dr. Fisher was always friendly toward his students in the class-room

DR. H. RUSSELL FISHER

and on the street, yet none the less exacting in his demands that we should know our stuff. To have him for an "oral" was the next worst thing to having the phantom-of-fifteenth-street himself. A list of Dr. Fisher's achievements and honors is too long for recital here. It is not enough to say that by precept and by example he has earned our highest respect. We are proud of him.

DR. HUNTER S. COOK

DR. O. F. BARTHMAIER

PHARMACOLOGY AND PHARMACY

REINHARD BEUTNER, PH.D., M.D.
*Professor and Head of the Department
of Pharmacology*

DEPARTMENT STAFF: J. A. Borneman; G. P. Miley; J. W.
Messey; R. E. Seidel; J. C. Munch; W. C. Dietrich.

How well we remember our first meeting with Dr. Beutner, when from the very beginning we were forced to learn the dose by "mouse". It took several lectures to really appreciate the wealth of knowledge stored in our gentlemanly professor's head. Not till our senior year did we realize that his lectures had not been in vain. Often we surprised even ourselves with the action of a drug we had picked up somewhere in the dim past. Dr. Beutner is an eminent pharmacologist, and frequently consulted by large pharmaceutical houses concerning new drugs. Realizing the vastness of such a course, he provided the class with a masterful set of notes, the majority of which have since been bound and will often be referred to in years to come.

In the laboratory we watched the action of drugs on animals, and received first hand information as to how they were supposed to work on the human body. In the periodic examinations we always managed to add a few "new and non-official" remedies to the Herr professor's armamentarium.

DR. JOHN A. BORNEMAN

DR. WALTER C. DIETRICH

Though Dr. Beutner is head of the department we would have been at a decided disadvantage if we had not had instruction from several of his associates. Dr. Borneman taught us the fundamentals of pharmacy, and gave us a working knowledge of how to prepare many prescriptions. This tall, and ever-helpful professor soon taught us that pills have to be made, before they can be prescribed. We triturated and succussed our way through pharmacy while Wall Street figures rose steadily on ready-prepared drugs. Although the same bottle of pills was graded many times, and many prescriptions were nothing more than colored water, we still retained much of the information given us.

In Drs. Christiansen and Dietrich we found a real pair of aides, men who were not above a frequent chat with the student over his many problems. We wrote prescriptions with a narcotic number until we were certain that opium should never have been discovered. Thus we finished our second year, having studied what kills and what cures, but as yet, not knowing why.

President.....THEODORE B. PODKUL

Secretary-Treasurer.....RALPH S. PHILLIPS

The group was founded by students of The Hahnemann Medical College who were especially interested in the field of Otolaryngology. They selected Dr. Charles B. Hollis as their sponsor because he was the expression of the best science and art of otolaryngology.

The Hollis Under-Graduate Society of Otolaryngology is the only undergraduate society on the campus that has no intrinsic system for selection of members. Membership in this group is solely dependent upon the applicant's attendance record.

Meetings are held for the purpose of exposing interested individuals to the best possible sources digested and condensed otolaryngological opinion and practice. Each meeting is terminated by group discussion and a special last-meeting-of-the-year is solely dedicated to group discussion.

On the last Thursday of each month the society enjoys the facilities offered by the Philadelphia County Medical Society at its home on the Southeast corner of Twenty-first and Spruce Streets, Philadelphia, Pa.

PHILLIPS ANATOMICAL SOCIETY

OFFICERS

<i>President</i>	ELMO F. MASUCCI
<i>Vice-Presidents</i>	NORMA SPIELMAN LESTER STEINBERG
<i>Secretary</i>	EUGENE LABOWSKI

In the spring of 1941, a new organization joined the ranks of the societies at Hahnemann. Its origin is credited to three Freshmen whose original intention was the formation of a seminar group for the purpose of conducting extra discussions and dissections in Anatomy. At the conclusion of three informal meetings, the society was opened to all students and was named the Phillips Anatomical Society in honor of Dr. Phillips. The first dinner meeting was held at the end of the school year at which time the society consisted of twelve members. The past few years have witnessed a rapid growth in membership until at the present time it consists of a representative group from each class.

The society meets weekly at which time some special topic in Anatomy is presented by one of the members. Monthly dinner meetings are also held, being attended by guest speakers in the various fields of Surgery and Anatomy. Society members have had the opportunity to hear many authorities and outstanding lecturers in the surgical and anatomical fields.

The requirements for membership in the society are the attendance of six meetings in any one semester, an active interest in Anatomy, or the presentation of some topic in Anatomy at one regular meetings. Upon completion of the senior year each member is given a certificate of membership. Guest lecturers automatically become honorary members of the society.

MEDICAL SCIENCE SOCIETY

OFFICERS

President.....ELIZABETH B. BROWN

Vice-President.....DAVID M. BENFORD

Secretary-Treasurer.....LUCY LA SALVIA

The Medical Science Society was founded in 1943. Its aims are to increase the scope of scientific knowledge in medicine, to further association with outstanding men of the medical profession, and to engender sociability among our fellows. We have one dinner meeting each month with an after-dinner speaker. It has been our good fortune to have men such as the following speak to us during the course of the year: Dr. Stanley Reimann, Dr. T. C. Geary, Dr. William Lee, Judge Kline of the Orphan's Court, Dr. Faris of Wistar Institute, Dr. Shay, Dr. Weiss, Dr. Bailey, Dr. Barnes, Dr. Brieger, Dr. Eberhard, Dr. Hepburn and others. From these men we have learned many things not found in books, but which will be of great value in our professional future.

EL CIRCULO HISPANO

OFFICERS

WILLIAM Y. LEE.....	<i>Consejero</i>
ANDRES A. ACOSTA-ACOSTA.....	<i>Presidente</i>
RUBEN S. SEDA-MORALES.....	<i>Vice-Presidente</i>
ZAHIDE M. TORRES-COLON.....	<i>Secretaria</i>

As the number of spanish-speaking students at Hahnemann increased steadily, it was thought that some form of organization would be of benefit to all. The Puerto Rican members formed the nucleus of this group, but the name "Circulo Hispano" was adopted so as to include any student of Spanish descent.

The purpose of the organization is to promote social relationship and assist new students over the difficulties that the older ones encountered

on their arrival in the States. This was especially true as to the variations in language and customs in this country. All meetings are conducted informally with some spanish-speaking faculty member or professional man being present. The meetings have proved very valuable in making school life easier. At the present time we are looking forward to the formation of an Alumni group in Puerto Rica, and are hoping that the present Hahnemann group will be the basis for the new organization.

CHRISTIAN MEDICAL ASSOCIATION

"I will praise thee; for I am fearfully and wonderfully made." —PSALM 139:14

Realizing the insufficiency of man and the all-sufficiency of God, Christian students at Hahnemann felt the need of meeting together weekly for fellowship and Bible study. Believing that "Jesus, the Great Physician" died that man might live, members of the Christian Medical Association have prepared themselves not only to treat the physical ills of mankind, but have attempted to develop understanding hearts with which to overcome the sorrow and despair of an ailing humanity. Although every physician must constantly keep abreast of medical progress, only those who recognize the best seller of all books, the Bible, to be a genuine textbook of medicine,

have the complete satisfaction that they have used to the best of their ability every available resource for the betterment of their patient's condition.

The organization is made up of medical students, nurses, and faculty members. There are no officers, and the meetings are open to all who wish to attend.

Five such groups in the various medical schools make up the Philadelphia Christian Medical Association which meets monthly at the University of Pennsylvania at which time an address is given by some outstanding Christian physician or scientist.

And then,

Here we are members of the Sophomore Class, with but one aim in mind, to become Juniors in May. To this end we are all working, but some undoubtedly will fall by the wayside. We hope to be different and have no fatalities at the end of this year. Our record to date is about ten per cent.

With slight aid from Dean Schmidt, our attendance record has improved remarkably over last year. Could it be we are more eager for education! Most of those who found fault with the new attendance system were those who never came to lectures anyhow.

Walked into lecture one day to find everyone gathered closely around the professor, and truly you could have heard a pin drop. Thought we really had lads eager to learn—turned out to be one of those last minute nugget sections! Incidentally, Dr. Buetner's Nugget Lectures were voted the most popular program for the Sophomore year—something not to be missed!

The Freshman year would best be called the battle of Physiology and Chemistry, the Sophomore year is a battle against time with General Sappington fighting the battle—trying to beat enough Pathology into our heads before time to call us Juniors.

We found during this year that Dr. Phillips remembered even more than he taught us last year, and all indulged in a bit of wishful thinking that someday we might have at our command the knowledge of the human body that he does.

Dr. Sylvis began hopefully to instill into our minds the Principles of Surgery, Dr. Goldsmith and staff taught us how to "hammer" on a patient's knee and hop out of the way before he kicked; listen to see if the man had a pair of lungs and a heart; and how to size-up a patient by just observing features—different features than the average fellow sees when "she" walks by! Dr. Taggart gave us the facts on how to get the patient to give us an accurate Case History, a history that really has some value!

The annual visit to the Borneman Laboratories in Norwood proved to be all the upperclassmen had told us. We really had a swell time, and at the same time saw the really sanitary conditions under which pharmaceuticals are prepared. Incidentally the refreshments were tops!

Dr. Beutner took extra special pains to teach us that "Luminal" and Phenobarbital were identical, and that there really was some therapeutic value to alcohol. Dr. Dietrick attempted to keep us from being made the laughing stock of the Hospital when we write our first prescription!

Dr. Cook worked hard with us in Bacteriology, and even aided in Pathology by allowing us to go home a little early on the day before an examination. Dr. Horneff spent many hours in trying to clear the muddy water out of our minds in both Pathology and Bacteriology. Dr. Barthmeier could be counted on for questions unusual! Leonard could be counted on for slides and specimens! Dr. Rambo always had a kind word and a helpful hand.

Walt Kistler worked hard as President of the Class and the first dance the Class of December 1946 sponsored was a great success. Dave Krusen, Treasurer; Charles Shapiro, Secretary and Art Kaupe, Vice-President, all did their names justice in their offices. John Holland, Student Institute, fought our cause hard in the Institute. We really worked together as a unit as Sophomores.

We all got to know each other a little more intimately in Physical Diagnosis—in fact—we could almost recognize each other in the dark! We became a little more acquainted with our own insides with our specimens for Bacteriology. We also found out that though cramming was not the best method of learning, it certainly

helped out a little. Each made plans for a small room attached to the "office" where he could retire and hastily brush up on the notes between patients!

Many of the class have launched themselves on the sea of matrimony, while others stand on the brink waiting for someone to push them. Others have gone a little deeper into the business and passed out cigars.

With the help of the Army and Navy, many of us continue our educations without having to worry about where our next tuition is coming from, and hoping someday to be worth the investment the Government is making. Sometimes I wonder!

there were Sophomore days . . .

Seriously though, our main aim is to be a credit to Hahnemann and a sturdy cog in the field of medicine when we are officially launched into the profession upon the completion of the Clinical portion of our studies.

'Til Then' from the song of the same name, we just remain,

THE CLASS OF DECEMBER 1946

THE SOPHOMORE CLASS

OF NINETEEN FORTY SEVEN

**. . . we went from classroom to clinic, traded
slides for a stethoscope . . . and in arrogance began . . .**

For a whole semester we had lived in a deluge of rumors. The Army would take over the institution any day . . . We would all be thrown into a common melting pot from which we might be sent to whatever medical center the government preferred . . . Those who remained would be housed in the Broadwood with its beautiful pool . . . These were fancies soon to become facts, at least in part. But so engrossed were we in the false magic of the 'Great White Father that only the historic drill fields of Meade and Cumberland could awaken us to the truth. Thus it was we entered our junior year; nephews of Uncle Sam, pledged to the art of healing in a world gone slaughteringly mad.

JUNIOR YEAR ...

met the patients . . . and the nurses

GYNECOLOGY

Gynecology embraces all the diseases of the female pelvis plus internal pelvic hypotonia. The introductory lectures of our junior year were delivered by Dr. Hessert, and upon completion of his short discourse we decided that pelvic anatomy was as simple as building a bridge. We were addressed the balance of the year by Dr. Craig, except for a few short interludes at which time Dr. Roman took over very ably. However, the bulk of the course was presented by Dr. Craig who was as sincere a teacher as we'll ever see. It was evident to all that he liked to teach, and he loved the subject which he taught. He was respected by student and faculty members alike for his profound knowledge of a specialty as important as Gynecology, and for the proficient manner in which he was able to impart it to the student. Dr. Craig was the first of the professors to pass on since our arrival at Hahnemann, and will long be remembered by the many who studied under him.

The Gynecology Dispensary was our first introduction to real cases which we handled in the best manner we knew how. If the oft-spoken adage were literally true, many of us would have left the clinics with one finger dragging the ground. Internal examinations were done by the dozens, and though our fingers didn't actually grow they certainly developed eyes.

Since the passing of Dr. Craig, the department has been taken over by Dr. Edmond C. Hessert whose remarkable teaching ability is almost a true replica of his erstwhile predecessor. His presentation of surgical technique in the clinics was as though he were painting a picture before our eyes. Dr. MacFayden's Monday morning clinics were equally well-taught, although we all agreed that the amphitheatre was only built for an audience of three. Perhaps someday, somewhere, someone will discover a few of the more obvious flaws in the teaching methods at Hahnemann, and of special import, the mass clinics in which little if anything is gained. We will often remember the Gynecology department at Hahnemann as we go our various ways in the practice of medicine.

EDMOND C. HESSERT, M.D., F.A.C.S., F.I.C.S.
*Professor and Head of the Department
of Gynecology*

DEPARTMENT STAFF: B. V. MacFadyen; D. A. Roman; A. R. Seraphin; A. W. Waddington; A. A. Hartley; F. B. Smyth; J. W. Smith.

DR. BRUCE V. MacFADYEN

DR. DESIDERIO A. ROMAN

NEUROLOGY

EDWARD A. STEINHILBER, M.D.
*Professor and Head of the Department
of Neurology and Psychiatry*

DEPARTMENT STAFF: H. F. Hoffman; J. H. Closson; G. R. Neff; P. A. Metzger; L. T. Sooy; B. M. Hand; C. S. Fox; F. J. Robertson; N. G. Frignito.

DR. N. G. FRIGNITO

With weak knees, stiff upper lips, and fear in our hearts we walked into our first Neurology class as juniors only to have another Hahnemann rumor blasted to bits in our path. We will never forget our first meeting with Dr. Steinhilber. He is a gentleman and teacher par excellence. His every word and action bespeaks the fact that he is thinking of the student first. The lectures were delivered as all lectures should be, with never a stir in the classroom. The material was presented in a ready-digested form. All we had to do was absorb it. The junior exams nearly killed three of our classmates. They held their breath for an hour for fear they would be thrown out. Two others forgot to swallow, and we all perspired.

Then there was also a course in Psychobiology presented by Dr. Robertson. Many of us never knew where the class was held, and others who read this will be hearing of it for the first time. To Psychology majors it proved very enlightening. The surprising part of it was that before the course was over we had shared the entire secrets of our lives with him.

Then came the senior year. At last we were to share the fruits of a trip to Allentown. We had been preparing for this momentous week ever since the beginning of our junior year, and now it had arrived. We secured a room and made our way toward the Hospital, (not having heard of the Circlon as yet). Dr. Hoffman and his staff took us through the gamut of nervous and mental diseases, and by the end of a week few of us knew whether to stay or return to school. More than once a patient convinced us that someone had committed him to get the benefit of his fortune, or because they didn't like him. And all the while we were in sympathy with the patient who was no more sick mentally than we were. Oh, yes.

Coming back from Allentown we began our work in the Neurology dispensary with the feeling that we were at least seniors and knew a little about the subject. Our confidence didn't last long for Drs. Neff, Metzger, Sooy, Fox, and Frignito suddenly unleashed their attack.

Again on Friday afternoons we met Dr. Steinhilber who presented excellent clinics with "food for thought" which was often more than we could swallow. The case was invariably built up to a climax, and when suddenly the diagnosis was exposed, it seemed so simple that we all wondered why we hadn't thought of it before. On many occasions he discussed private cases with us, and at other times provided us with nuggets concerning the legal aspects of neurology, and the many pitfalls.

Above all else, our respect for Dr. Steinhilber is based upon his sincerely independent and enthusiastic teaching, unhampered by the bonds of superiority so readily seen in many of the departments at Hahnemann.

DR. PAUL A. METZGER

JOSEPH McELDOWNEY, M.D.
*Professor and Head of the Department
of Physical Diagnosis*

PHYSICAL DIAGNOSIS

For two years we had awaited the day when we too might place a stethoscope in our ears and hear those big, blowing murmurs and those soft, swishing murmurs that were so frequently spoken of by the upperclassmen. In Dr. McEldowney we found one of the most genial and highly respected men we were to meet in our entire stay at Hahnemann. Never once did he raise his voice above the calm and cool monotone with which he spoke, yet the silence was so marked we could almost hear rails from where we sat. On many occasions we were tempted to say we had heard the murmur which he had so carefully pointed out to us, yet we somehow felt that whether our answer was "yes" or "no" he already knew how much we had heard. His sincere modesty and desire to impart all that he could to the student placed him high on our list of favorites. The department was well organized, and provided the foundation for most of the physicals we were to do later.

DEPARTMENT STAFF: M. A. Goldsmith; L. L. Lane; T. J. Vischer; G. F. McDonough; W. Klinman; C. E. Lawson; W. S. Hoenstine.

DR. JOHN A. BROOKE

ORTHOPEDICS

In Dr. J. Brooke we met a man whose very actions personified his specialty. He walked and "ah" talked like an orthopedist. His Saturday morning lectures in the junior year were presented almost as though a real patient existed and was being demonstrated. Dr. Edwin O. Geckeler then proceeded to give us his Friday morning clinics with results so astounding our mouths gaped for an hour after. Fractured hips practically walked home the next day.

AND PROCTOLOGY

It was also during the junior year that Dr. J. D. Schofield undertook to present the common and troublesome diseases of the anus, rectum, and sigmoid colon with special reference to the "pile-bearing" inch. His slides were nothing short of beautiful, though the background might have been more carefully chosen. His clinics gave us ample opportunity to see what a rectal carcinoma could and would do if not treated early.

FRANK O. NAGLE, A.M., M.D.
*Professor and Head of the Department
 of Ophthalmology*

OPHTHALMOLOGY

We can all take pride in the knowledge that we were well prepared in this important phase of medicine which receives at Hahnemann much more emphasis than in most other institutions. This was made possible by efforts of well chosen eye men under the direction of Dr. Frank O. Nagle. Dr. Nagle, who has been associated with Hahnemann for over forty years, has in the past contributed generously of his time and interest to the institution. In addition to work in his specialty as coordinator of this department, Dr. Nagle has served on the Medical Council and on the Admissions Committee in times gone by. In more recent years he has made available opportunities for younger men interested in the specialty. Respected and admired by all who know him, Dr. Nagle is representative of Hahnemann at its best.

DEPARTMENT STAFF: T. M. Snyder; C. J. V. Fries; H. S. Weaver; W. S. Sutherland; W. J. Ryan; M. W. Benjamin; H. F. Flanagan; J. S. Miller; J. K. Finley; J. Cossa; J. B. Conwell; G. P. Glenn; N. A. Karakashian; K. W. Benjamin.

DR. CHARLES J. V. FRIES, JR.

DR. H. F. FLANAGAN

Our lectures in Ophthalmology were ably presented by Drs. Fries, Cossa, and Snyder. We were taught how to handle ordinary emergencies and diseases of the eye as well as some of the fundamentals in physiological optics. Early we realized that there was a lot more to Ophthalmology than meets the—(no!) Under Dr. Fries we were taught how necessary it is to individualize eye cases and to realize the importance of so-called “details.” Dr. Cossa, one of the most popular younger men on the staff, taught us the art of Ophthalmoscopy so well that there was a call

for extra lectures, and for many weeks Dr. Cossa got up at an early hour for 8:00 a.m. sessions. Here we learned the importance of the ocular fundus as an aid to diagnosis of many common diseases.

Drs. Miller and Sutherland helped us over some of the difficult practical work in the afternoon clinics, and although our acquaintance with them was short, we were fortunate in having the privilege to take some of our work under their capable guidance.

To the uninitiated Otolaryngology means the study of the diseases of the ear, nose and throat. Our first introduction to the course was forcefully drilled in by the dynamic Dr. McGrath. Needing neither loud-speaker nor lecture notes Dr. McGrath delivered the goods in such rapid fire manner that passersby well might have wandered in to call their bids—only to hear “Sold” for “A-cute Rhinitis”.

With adequate props Dr. Clay well illustrated the anatomy of the ear and lectured on the more common diseases affecting it. None of us will forget his instructive quizzes mixed with ready wit and calculated to fix firmly in our minds the important facts. Under Dr. Clay work was made so pleasant that we were amazed to find out we had really learned something. An inaccurate answer to a quiz question invariably got the reply, “I won’t come to you when I have an ear-ache!”

DR. CARROLL F. HAINES

DR. RAYMOND McGRATH

OTOLARYNGOLOGY

The senior clinics in this department were considered among the best and this was due in no small measure to the gentlemen who taught us, Drs. McCutcheon, Haines, and Russell Geary. Dr. Haines demonstrated high potencies in action, and in forthright manner emphasized the importance of considering diseases of the ear, nose and throat on a constitutional as well as a local basis. We observed how patients were treated as human beings and not just a "case". Dr. Russell Geary was a favorite with all of us. Accurate observation and careful workmanship were emphasized by his example. We saw the results, for lip-service is not the maxim of a Geary.

Dr. McCutcheon's patience and understanding in teaching us how to use nose and throat instruments were deeply appreciated. Practical, useful points were made ours.

DR. CHARLES B. HOLLIS

It is with special pride that we express our sincere appreciation to a man whom we all admire, Dr. Charles B. Hollis. He has remained ever faithful to the students at Hahnemann. Through his efforts, indifferent to personal sacrifice, opportunities not otherwise available were open to all who would take advantage of them. As sponsor of the Hollis Otolaryngological Society, he has brought before us prominent men from among his host of friends and associates in this field.

To have been deprived of instruction under a top man and an inspiring teacher, especially in these days of war when good men are at a premium on the home front, is nothing short of criminal!

It goes without saying that we shall not forget the generosity, courage and wise counsel of our friend, Dr. Hollis.

JOSEPH V. F. CLAY, M.D., Sc.D., F.A.C.S.
*Professor and Head of the Department
of Otolaryngology*

DEPARTMENT STAFF: L. E. Marter; J. R. Criswell; C. F. Haines; R. D. Geary; A. V. Hallowell; J. H. McCutcheon; R. McGrath; H. J. Kohler; W. A. Weaver; W. V. Hostelley; H. P. Harkins; R. M. Rapp; G. N. A. Wescoat; J. V. F. Clay, Jr.; S. Burtoll.

DR. JOSEPH R. CRISWELL

PEDIATRICS

Although most of us have never seen the Chief of Pediatrics, Dr. C. S. Raue, also author of a leading textbook on diseases of children, we were not lacking excellent instruction by experts in this field. Normal pediatrics was ably taught by genial, good-natured Dr. Redman. In addition to normal weights and measurements, infant feeding schedules and proper formulae, we learned the importance of the more common diseases of childhood. Precision and accuracy were the watchwords of Dr. Redman.

The three weeks' in the Pediatric Dispensary were much too short, but under the capable direction of Drs. Fletcher, Reading and Lumish, we put to actual practice some of the things we had learned.

Having made the acquaintance of Dr. Jack Noon in the freshman year, we met him again in our junior Pediatrics ward work. No one else has quite the knack of doing spinal taps, jugular venipunctures, and other annoying but necessary procedures. In our senior year we saw him only occasionally, but one Friday afternoon he dropped in to "give us Syphilis". Dr. Noon is really "one of the boys" and is highly regarded by all who know him. He transformed our reluctant trips to Municipal on Saturday afternoons into a really enjoyable experience—never without his sprightly humor and sound practical comments.

DR. J. L. REDMAN

We wish to extend our plaudits to Dr. Carl Fischer for his very real contributions toward the foundations in our chosen profession. To him we are indebted for an exceptionally well integrated and interestingly presented course in Pediatrics. Not only as a specialist in that department of medicine but also as a student in the broader field of human understanding, Dr. Fischer has given freely of his time and has made it of prime concern to him that we should go forth into the profession well qualified and prepared to do a good job.

His up-to-the-minute knowledge of many phases of medicine have made him much in demand as a speaker at student gatherings and society meetings, and in this way he has contributed materially toward the establishment of closer student-faculty relations.

As capable administrator of alumni affairs at Hahnemann for the past decade, his long record of faithful service to the institution would be difficult to estimate in terms of time and personal sacrifice. Largely through his efforts interest has been stimulated in establishing a strong alumni group with unity of purpose—the culmination of which is the bed-rock for survival of Hahnemann traditions. Sincere in his enthusiasm for advancing the prestige of Hahnemann men everywhere and for the realization of a Greater Hahnemann, Dr. Fischer has won the admiration of us all.

CHARLES S. RAUE, A.M., M.D.
*Professor and Head of the Department
of Pediatrics*

DEPARTMENT STAFF: B. K. Fletcher; J. L. Redman; C. C. Fischer; J. H. Reading; R. A. Hibbs; W. P. Gregg; H. A. Agerty; H. B. Mark; P. M. Kistler; F. W. Jarvis; P. J. C. Gamblescia; J. R. Noon; A. C. Service.

DR. CARL C. FISCHER

DR. B. K. FLETCHER

UROLOGY

The Department of Urology up until the past year was under the supervision of Dr. Leon T. Ashcraft who passed away before we had the opportunity of having him as a teacher. However, we have received an excellent foundation in this field of medicine under the new head of the Department, Dr. Edward Campbell, and his staff. Dr. Campbell, a really top man in his specialty, went to all ends to explain the various diagnostic and surgical procedures used in studying a case of renal calculus, Ca of the bladder, and a host of other conditions. His forthright manner in presenting his course and his kindly attitude toward his students places him in vanguard of good men at Hahnemann.

During the junior year Dr. Kenworthy (with a cigar in his mouth) presented a series of lectures on the genito-urinary diseases. Dr. Weinstein then finished the year by discussing the bag of worms and the cosmetic effect of an orchiectomy in the elderly male.

DR. LEANDER P. TORI

In the urology dispensary we had one of our first opportunities to actually treat patients and to feel as though we at last were growing up. At first we were all eager to do a prostatic massage; but by the end of the session; only Jimmy Hoffman was still around (Jis' passing sounds). Drs. Tori, Leonard and Walker capably directed the dispensary in such a way as to give every student individual instruction. In our senior year—we had the privilege of instruction under Drs. Hunsicker and Weinstock. Their lectures and clinics were very instructive and provided a fine review of the surgical procedures used in Urology.

EDWARD W. CAMPBELL, M.D.
*Professor and Head of the Department
of Urology*

DEPARTMENT STAFF: J. M. Kenworthy; E. W. Campbell;
W. C. Hunsicker; C. F. Leonard; L. P. Tori; H. G.
Blessing; H. L. Weinstock; W. Ellis; R. E. Morgan.

DR. WILLIAM C. HUNSICKER

DR. J. MILLER KENWORTHY

ROENTGENOLOGY

JACOB W. FRANK, M.D.
*Professor and Head of the Department
of Roentgenology*

DEPARTMENT STAFF: J. J. McKenna; A. E. Krick; H. D. Evans; J. S. Lehman; F. T. Kepler; W. S. Serri.

DR. A. E. KRICK

During our junior year we received a series of lectures on the development and use of X-ray from the Head of the department, Dr. Frank. Although many had difficulty staying awake in the darkened room, those who did received much benefit from their attention. It was then that we fully appreciated Dr. Frank's complete understanding of Physiology, Anatomy, and Internal Medicine as well as Roentgenology. We were firmly convinced that no other department could function more smoothly as a unit than this one did. Each member respected the opinion of his colleagues, whether his junior or senior.

ANESTHESIA

HENRY S. RUTH, M.D., F.I.C.S. (Assoc.)
*Professor and Head of the Department
of Anesthesiology*

DEPARTMENT STAFF: E. A. Tyler; E. P. Van Tine; J. F.
Rowland; R. C. Smith; A. J. Catenacci.

Although not a major course in our medical careers, the Department of Anesthesia must certainly be recognized for its outstanding record, not only at Hahnemann, but throughout the entire country. Dr. Ruth, who is Editor-in-Chief of the *Journal of Anesthesiology*, is one of few faculty men whose accomplishments have placed him high in the realm of modern medicine. He was instrumental in bringing Dr. John S. Lundy of Mayo Foundation as guest lecturer. During the junior year we listened to a series of lectures by Dr. Van Tine on inhalation anesthetics with special reference to ether. Dr. Ruth and Dr. Tyler completed the course by taking up several of the newer agents, as well as discussing spinal anesthesia. There is no organized study during the senior year, but individual instruction is given at the operating table for those who are interested.

BOERICKÉ

OFFICERS

President.....ALBERT E. HATHAWAY

Secretary-Treasurer.....WILBUR F. JEHL

THERAPEUTIC SOCIETY

The Garth W. Boericke Society of Therapeutics was organized in 1936, for the purpose of stimulating further interest in the treatment of conditions the physician meets in everyday life. As new methods and drugs are constantly coming into being, the society tries to keep abreast of the times as well as study those methods that are already accepted and proved.

To become a member of the society, a candidate must exemplify his interest in Therapeutics by submitting a paper to the society on some particular phase of Therapeutics. Membership is open to those in the Junior or Senior classes meeting the qualifications.

Dr. Boericke well exemplifies the ideas set forth by the society in his never exhaustible knowledge of Therapeutics and his ever present desire to impart that knowledge to the members. Every meeting will be long remembered for his cheerful countenance, his witty remarks, his inevitable cigar, and his more than instructive ability to talk endlessly on any therapeutic problem.

Our meetings during the past year have consisted of presentations of original papers and reviews of therapeutic problems with which various members have been interested. After the paper was presented, group discussion would follow with Dr. Boericke adding from his great storehouse of "nuggets".

We are honored on the last meeting night of the year, for this night Dr. Boericke claims for his own. It is the greatest and most enjoyable night of all, for conventions are forgotten and keys and certificates are presented climaxing a year of pleasant associations and instructive activities.

LANE MEDICAL SOCIETY

"Nature has given to men one tongue, but two ears, that we may hear from others twice as much as we speak"

—PICTETUS

OFFICERS

President.....CHARLES WALKER

Secretary-Treasurer.....GEORGE W. DEITZ, III

The Lowell L. Lane Medical Society was organized on December the fifth, 1910 for the purpose of consideration and discussion of medical topics, differential diagnosis of diseases, and their relationship. The membership to the society is limited to twenty Seniors, whose election is based primarily upon their active interest in medical affairs and the advancement of medical science.

During the course of the year, the society met the first Wednesday of every month at Holland's Restaurant where we learned that good food still existed in Philadelphia despite the War and O.P.A. and that steaks had not become a memoir. A varied program was sought according to the desires of the members with selection of guest speakers and subjects for discussion not usually considered in the school curriculum.

Among the memories of the informal discus-

sions, where closer contacts with fellow classmates and professors were made, will not be forgotten those salient points in the practice of medicine brought to us by discussions with such men as Dr. Geary in his talk on the "Medical Aspects of Surgery," Dr. Ricketts for his enlightening discussion on "Psychosomatic Medicine in Gastro-enterology," and Dr. Lane's grand presentation on "Diagnostic Hints in Medicine."

We have had many rich experiences during our years in medical college, but keeping in mind that old Chinese proverb—"A single conversation across the table with a wise man is worth a month's study of books", we shall always remember Dr. Lane for his greatness and many attributes—as a diagnostician and physician, teacher and organizer, humanitarian and friend.

FISHER CLINICO-PATHOLOGICAL SOCIETY

OFFICERS

Co-Chairmen.....ROLFE A. HECK

RICHARD G. ELLIS

The Fisher Pathological Society was organized by Dr. H. Russell Fisher, and membership was open to those interested in the clinical aspects of Pathology. At the meetings which are held the last Thursday of each month, speakers in this field are invited to address the group. Clinico-pathological cases are also discussed giving each member a chance to utilize his knowledge of diagnosis. The highlight of the past academic session was the return of the Society's sponsor, Lt. Commander Fisher, from his duties overseas. As guest speaker, he enlightened the group as to his many experiences in Naval Medicine.

REIMANN ONCOLOGICAL SOCIETY

OFFICERS

President.....DEFOREST W. METCALF

Vice-President.....JOSEPH E. TURNER

Secretary-Treasurer.....EARL L. KEETER

The Reimann Oncological Society has as its purpose the earnest desire to promote cancer consciousness among its members. That this purpose has been attained may be evidenced by the spirit of unity in the diligent quest for cancer knowledge by the members of the society. We have as our leader in this search a man most able to cope with the cancer problem, Dr. Stanley P. Reimann. No praise is great enough for him. We are sincerely proud to call him our friend and counsellor. Dr. Reimann has brought within our grasp the modus operandi of malign-

ant change so far as is known today. He has obtained some of the foremost men to speak to us. No phase of the problem has been left untouched. From the surgical and biochemical reactions down to the fascinating thoughts of isotopic tracer compounds have been expounded to us. We can safely say that we are equipped with a knowledge of cancer such as is offered in no other medical college in the United States. Ours was indeed a fortunate lot to be so closely associated to Dr. Reimann.

REDMAN PEDIATRICS SOCIETY

OFFICERS

President.....WILBUR F. JENI.

Vice-President.....LEONARD J. ROTONDI

Secretary-Treasurer.....GEORGE W. DIETZ, III

In 1941 Dr. Franklin Massey, who was then in his junior year, along with several other members of his class organized what is known as the Redman Pediatric Society. The idea was spontaneous and entirely voluntary on their part, with some advice from Dr. Redman. Since that time the same spirit has continued with Dr. Redman acting only in an advisory capacity. A constitution was drawn up, and the first formal

meeting was held in the early part of 1942. The membership is made up of twenty Seniors and twenty Juniors, the latter being elected shortly after mid-year examinations. Scholarship is an important, but not the sole requisite for membership. All financial matters, as well as time and place of the meetings, are decided by the members. Meetings are held once a month, at which time a guest speaker usually addresses the society on some correlated Pediatric subject.

HESSERT GYNECOLOGICAL SOCIETY

OFFICERS

President.....RALPH S. PHILLIPS

The Hessler Gynecological Society, formerly known as the Craig Gynecological Society, was founded during the second semester of the past year. It was with deep regret that our members saw the passing of our former professor and sponsor, the late Dr. Earl B. Craig, one of the pioneers in modern gynecological medicine and surgery. Following the death of Dr. Craig, the members met with Dr. Hessler, who accepted the sponsorship. The Craig Society was originally organized by Dr. Hessler in 1940.

In order to promote the Oslerian plan of group conferences, Dr. Hessler kindly offered his home in Audubon, New Jersey, as our meeting place. The group meets on the last Monday of the month, eight times during each academic year. Membership is limited to ten seniors and five juniors who are selected chiefly on their scholastic attainment with special reference to Gynecology. Graduates of the Society receive membership certificates, are considered life members in good standing, and are always welcome to future meetings of the society.

Seniors

That ancient adage, "All that glitters is not gold", may well be applied to our Junior year. Arrayed in varying shades of sun and bar-room tans, we returned last October expecting to accomplish a few minor miracles of medicine. Behind us were those dreary days of endless lectures and those long sleepless nights of memorization. Little did we know! Instead, seven hours of lectures every day gave us all severe cases of writer's cramp and secretary's spread. To add insult to injury we had two eight o'clocks a week during second semester. Who in hell ever said this was an easy year?

Our terrifying dreams of the Great White Father were more than replaced by horrible nightmares of proddings by a black bull sprouting Simpson forceps. In Obs lab we were lead through the bewildering maze of the birth canal with one hand behind us and only two fingers as a guide. Trusting rear ends were bared in Syph. Clinic, and with an encouraging word and trembling fingers we closed our eyes and jabbed a three inch stiletto up to the hilt. "Ouch"—"Oops, must have been a dull needle." Dr. Tori promised us an A if we caught and massaged a

Senior. We tried hard, but no luck, we had to be content with the occasional, "Ah, now you got it, Doc." Orchids to the GU Department for their correlated didactic and practical courses.

Physical Diagnosis also offered some patients for examination. Who will ever forget "Buster" Doman's schoolgirl blush when asked to palpate a thrill on a young female. Pediatrics was fun. We played with the kids, and when that became boring, started on the nurses.

Holding our noses we surveyed the gorey sights at P.G.H. The unanimous decision was that one must be nuts to be a pathologist—at least it helps.

Twas rumored Block will be consulting obstetrician at West Jersey next year. Despite Dr. Crothers and Miss Lucky, Cupid found his way into the hearts of several students and nurses. Jaz swears, "This is the real thing."

As a diversion, we ventured to the far corners of Philadelphia on field trips. From them we acquired an amazing collection of memories. Imhoff tanks, butter from garbage, tasteless and odorless water, free lunch on Mr. Abbott, Kosher-killed bulls—What won't Cooky think of next?

Most inspiring this year was our introduction to some "big" men at Hahnemann. Words cannot express our gratitude to these men who made their lectures so interesting, we forgot how tired we were. Many of the men we met in Clinics and sub-sections are also of this same high caliber. We want to thank all of them for the time and effort they spent in preparing presentations so interesting, well organized and instructive.

In spite of the usual dirty politics at elections we have been fortunate in our officers for all through the years Bob Woodmansee, Jim Winkler and Bob Carpenter have guided us capably through our many trials and misunderstandings.

Despite the downright lack of co-operation and encouragement from the front office, about fifteen members of the class took the National Board exams. Good luck kids and we hope your efforts will be reflected in a better understanding on the part of the administration for the future classes.

of tomorrow

High spots of this year—"I have a letter from the Dean"—Cigarettes for the Army—Beardsley's loud ties—A-cute rhinitis—Hematuria spells Cystoscopy—"I haven't opened a book since exams"—Orientation—"Do you think they'll bring the baby to class with them?"

—And so on—but with summer, comes our last and best year. They have to give us patients sometime—so maybe then we will find out what this Medicine business is all about.

**. . . and then, the long-awaited goal had
finally arrived . . . with great humility we entered . . .**

The campaign would soon be over. In the past few months we had progressed rapidly with the Army, Navy and civilian components functioning smoothly. Here and there were minor details to be checked, and mopping up operations to be done. That the battle had been won was without question. The casualty list became shorter, and after every skirmish the wounded were quickly cared for. Then suddenly, with port in sight, they came. Out of the gray dawn, their engines droning and their cannon bursting with flame . . . Silently we stood while they were buried at sea. As the sun set in the west, three flags drifted lazily to our stern. Dusk settled over the ship, and in the shadows we could make out a blue one between two khakis. Comrades they were . . . and not easily forgotten.

SENIOR YEAR...

Returning from Allentown . . . we
headed for our last attempt at
bedside manner . . .

MEDICINE

G. HARLAN WELLS, B.S., M.D., F.A.C.P., LL.D.
*Professor and Head of the Department
of Medicine*

DEPARTMENT STAFF: J. McEldowney; H. A. Taggart; D. R. Ferguson; E. R. Snader; M. A. Goldsmith; G. D. Geckeler; J. A. Crellin; L. L. Lane; G. P. Fincke; R. W. Larer; D. W. Kirby; M. Fiterman; T. J. Vischer; M. Viglione; C. E. Lawson; W. Klinman; W. S. Hoenstine; H. M. Sharkis; R. S. Magee; P. J. Warter; J. H. Davie; J. R. Ginther; H. Kline; C. J. Kleinguenther; J. P. Burkett; A. Doering; T. E. Pugh; W. F. Basinger; F. G. Stubbs; C. H. Baldwin.

Our first introduction to the study of clinical medicine was in the sophomore year under the able guidance of Drs. Taggart and Viglione. These two men were to teach us most of our medicine, for, although both busy specialists on the outside, they have devoted more time than any others to make up for the man-power shortage in this department owing to the absence of many men in the armed forces. Moreover, they have done a superb job in getting across to us the essentials of good medical practice. None of us will forget Dr. Taggart's excellent lectures on infectious diseases or his scholarly precision in dealing with medical problems. Dr. Viglione, likewise will be remembered for imparting to us his wide experience in diseases of the heart and chest. If we seem partial to the Taggart-Viglione team perhaps it is because we know them better; or maybe because they are living examples of what someday we aspire to be—honest-to-goodness physicians. If they were more friendly and informal in their attitudes toward us than others, they were more exacting in their demands for a high calibre of work. Repay these men we can not. However, may they take some small compensation in knowing that the class of 1945 is deeply cognizant and appreciative of their painstaking efforts on our behalf.

Medical diagnosis was masterfully presented by Hahnemann's brain-trust of Cardiology, Dr. Lowell L. Lane. In addition to Blumer's Rules for Diagnosis, many of us came to realize the functional significance of a mitral murmur or the venous pulse waves. All of us marveled at the man who was able to classify a heart functionally as III-(c), and in his own mind there were probably reservations as to whether the "c" were high, medium or low. We admired his reserved enthusiasm, his ability to tackle a problem with complete objectivity, and above all the facility with which he called us "Doctor" as though he really meant it.

Dr. Goldsmith's excellent clinic in the senior year together with his informative lectures on Diabetes, Anemia and allied subjects, which we received as juniors, were among the best we have had at Hahnemann. His interest and patience in teaching us has won for him the respect of us all.

Mentioning Diabetes demands that we complete the couplet and add Snader. His nicety of judgment and balance in treating these cases is one which comes only with wide experience. Lord help the poor fellow who doesn't know how to give U-80 in a U-40 syringe. Dr. Snader's lectures on Endocrinology in the senior year were well worthwhile, and if the results we see on the Philadelphia streets are not what we think they should be, we will remember that priceless quantities of the newer biologicals reach Dr. Snader for experimentation months, perhaps years, before they are available to anyone else, Joe Beardwood excepted.

Dr. G. Harlan Wells, Professor and Head of the Department of medicine, will long be remembered for his famous lectures on three main topics: Heart Disease, Kidney Disease, and State Board Disease. His attempts to get us to think medically, to associate medical ideas correctly are well illustrated by the following, one of his favorites: "A hatchet is a good thing, but not to eat soup with." It must be admitted, however, that, although we hold him in high esteem as a physician (and that is the principal thing) when important decisions were to be made concerning our welfare, he was inclined to sit on the fence and has been known to "jump out the window."

DR. HAROLD A. TAGGART

DR. MICHELE VIGLIONE

DR. LOWELL L. LANE

WILLIAM M. MARTIN, A.B., M.D., F.A.C.S.
*Professor and Head of the Department
 of Surgery*

DEPARTMENT STAFF: J. A. Brooke; W. M. Sylvis; D. Roman; J. D. Schofield; T. L. Doyle; D. Steinmetz; E. H. Dickinson; E. D. Geckeler; E. F. Carpenter; T. C. Geary; C. L. Shollenberger; D. T. Jones; C. P. Bailey; W. Y. Lee; D. D. Northrop; E. D. Sharpless; N. F. Hoffman; S. J. Rilling; J. A. Seligman; C. C. Thompson; M. P. White; E. L. Rosato; F. H. Murray; W. A. Buck; R. C. Moyer; M. F. Ondovchak; J. J. Domanski; L. S. Lipsitz; R. C. Smith; H. J. Lubowitz; W. C. Thoroughgood; A. E. Pearce; J. H. Smith; M. J. Fischer; E. J. Benko; W. G. Kirkland.

From our earliest premedical days we had anticipated our first contact with the field of Surgery. For some reason it held a place in our minds above all other specialties. So it was that we were introduced to minor surgery by Dr. Bristol in our Sophomore year. Soon after we were shown how to "splint them where they lie" by Dr. Shollenberger, who also gave us a complete course in proper bandaging technique. In the junior year we first met Dr. Ted Geary, whose lectures on the diagnosis of the acute abdomen were masterfully presented. They will serve us for years to come in those critical moments when decision must be made without faltering. Our debt to him is only partially acknowledged by the fact that he was unanimously voted by the class to receive the Dedication of the 1945 Medic. In the ten-week sections Dr. Lee told us what to do for the patient before and after operation. His "booming" voice often wakened someone curled up in the corner of the little fourth floor classroom. Dr. Carpenter constantly presented hypothetical cases from which arose no end of argument. His four-question true and false quiz will always be remembered as one of the toughest exams we ever

SURGERY

had. At least according to the grades. In the dispensary we had our first opportunity to put on a pair of gloves, and assist Dr. Hoffman in the so-called office procedures (without anesthesia).

Throughout the senior year we had the opportunity to listen to Dr. William Martin, Head of the Department of Surgery, whose surgical lectures were certainly as fine as those given in any other teaching institution in the country. "In this clinic we feel", was a frequent prefix to an afternoon of posterior no-loop gastrojejunostomys. We deeply respect Dr. Martin for his outstanding ability as a surgeon and teacher. Complicated surgical procedures were elucidated in a simple manner so that they were readily understood by all.

During the ten-week surgery section of the senior year, we again met many of the men whose acquaintance we had made for shorter periods in the earlier years. Among these was Dr. William Sylvis. He has the all too rare ability to think anatomically, and in this gift he has no peers at Hahnemann. He will be remembered not only as an able surgeon but also as a dynamic personality who put much of himself into his work. It was our great privilege to observe the fine points of plastic surgery in the clinics of Dr. Thomas L. Doyle, one of the outstanding plastic surgeons of the country.

Last but by no means least we pay tribute to Dr. Charles Bailey, one of Hahnemann's notables. Through his outstanding ability as a thoracic surgeon and by way of his prolific writings in the outstanding medical journals of the day, he has done much toward placing the name of Hahnemann where it rightfully belongs. As an adventurer into unblazed trails in the surgery of the heart and lungs he has attracted wide recognition for his skill and achievement. However, when it comes to ligating the thoracic aorta for twenty-five minutes and getting away with it, we must admit that "Fortune favors the brave." Occasionally he was even trusted with one of Dr. Lane's heart cases for whom medicine could do no good. Because of the current interest in this field and its increasing importance, we think it fitting to append here a partial list of his writings:

Bailey, C. P.:

"Use of Penicillin in Prevention of Post-operative Empyema Following Lung Resection." *J.A.M.A.*, Dec. 16, 1944.

"Pulmonary Resection for Tuberculosis." *Lippincott's Clinics*, Vol. 3, No. 5, April, 1945.

"Thoracic Surgery." *Encyclopedia of Med. & Surg. Specialties*, F. H. Davis.

"Civilian Traumatic Thoracic Surgery." *Lippincott's Clinics*.

"Treatment of Pulmonary Abscess." *Penna. Med. Journal*.

"The Role of Thoracic Surgery." *Penna. Med. Journal*.

DR. WILLIAM M. SYLVIS

DR. THEODORE C. GEARY

DR. CHARLES P. BAILEY

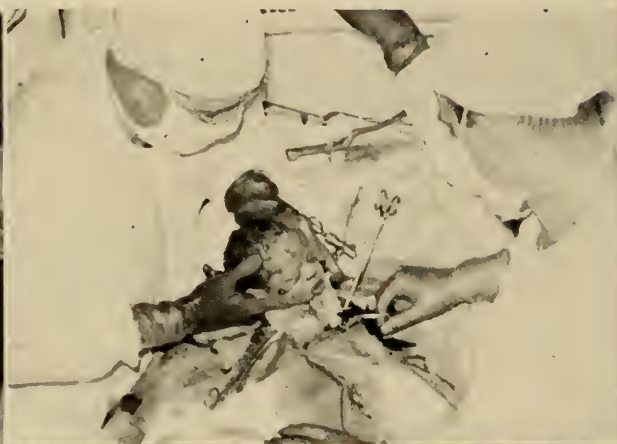

NEWLIN F. PAXSON, B.S., M.D., F.A.C.S., F.I.C.S.
*Professor and Head of the Department
of Obstetrics*

DEPARTMENT STAFF: A. Mutch; H. L. Crowther; H. D. Lafferty; R. R. Gates; R. M. Hunter; P. C. Mook; W. G. Wosnack; F. M. James; R. J. McNeill; H. D. Evans; D. Griggs; P. M. James; A. S. Damiani; N. Lepper; L. M. Stetser; M. F. Hayes.

OBSTETRICS

Our introduction to the department of Obstetrics came during our junior year. Dr. Crowthers impressed us with the importance of knowing the measurements of the normal female pelvis, and warned us that by the end of the year we would know them as well as our name, whether we wanted to or not. With the aid of a rubber life-size doll and an iron manikin the mysteries of childbirth and the normal mechanism of delivery were made to appear very simple. Of course, what seemed easy to watch became another story when we went to the Obstetrics lab and attempted to pull out an LS/MFT, or apply the forceps.

Dr. Lafferty went to great pains to make it clear that we should all be in the room with the door closed before the bell rang. Failure to obey his rules might mean anything from being thrown out of the room, to being first assistant at his lecture. He was probably the most hated man in town for several days after politely refusing all "slideless seniors" the privilege of taking his exam. His sudden inspirations such as, "Let's call it a day", were never quite understood, but somehow in spite of these innate peculiarities we held him in deep admiration for one of the most noble of traits, his fearless ability to stand on his own two feet and let no one kick him around.

At the middle of the junior year Dr. Paxson began his series of lectures that was to take us through the entire field of Obstetrical problems. His pleasing voice and fatherly manner made the course so interesting that we found ourselves spending as much time studying Obstetrics as all other courses combined. However, warnings from our predecessors may have had some bearings on our efforts.

Our first experience with the reality of a delivery came in the week spent at West Jersey Hospital. There we soon learned that human gestation lasted nine months to the hour, and frequently provided a good reason to crawl out of bed in the wee hours only to find them cutting the cord. By the time we reached pre-natal clinic we began to feel that we could make some practical application of what we had been taught. At least we could diagnose pregnancy by the sixth month. Again we spent a week on maternity service at Hahnemann. With sirens blaring we rolled up Broad Street in the red wagons usually to find baby and placenta wrapped neatly in newspaper lying on the floor by the stove. Such were the experiences of most of us. And so, as we leave to practice hither and yon, we wish to acknowledge one of the most complete, most well-taught, and most gainful courses of our careers.

DR. HENRY L. CROWTHER

DR. HENRY D. LAFFERTY

DR. ALBERT MUTCH

THERAPEUTICS

GARTH W. BOERICKE, M.D.
Professor and Head of the Department
of Therapeutics

DEPARTMENT STAFF: J. V. Allen; J. W. Frank; F. Kepler;
J. A. Borneman; Mina Scholl; N. V. Ludwick; W. B.
Griggs; J. J. McKenna; A. E. Krick; R. K. Mattern;
R. S. Magee; J. J. Klain; H. D. Evans; W. M. Snowden;
J. S. Lehman; E. M. Almes; L. M. Diemer; I. R.
Bishow.

*"Men must be taught as if you taught them not
And things unknown proposed as things forgot."*

—Pope

Our friend since the earliest days at Hahnemann, Dr. Boericke has gone with us all of the way. Whether in the classroom or on those memorable ward walks, his was the art of teaching medicine the way men like to be taught, and his sincere interest in his students is perhaps the keynote to his success as an interpreter of medical knowledge. Surveyor of therapeutic highways from Ferrum Phos. to Penicillin, Dr. Boericke had the enviable ability to boil things down to their simplest terms and to correlate in our minds the practical with the theoretical. Who could forget those famous "nuggets"? When as seniors we became more interested in the practical and ethical aspects of medicine, his advice was this: "It is natural that you now begin to think of the ethical side of medicine; you can always go into the patient's bathroom and look up some obscure piece of forgotten knowledge." Dr. Boericke was never without his keen sense of humor—even on those Blue Monday mornings of our junior year.

Somehow we feel that the things he has given us will not be forgotten. It was not his way to chide us about our mistakes, but rather to correct them by repetition and emphasis. Magically productive in the boundless humanity of the born physician, he tried to cultivate in us the faculties of medical judgment and reasoning. And so it is our feeling, although Dr. Boericke would be the last to concur in this, that in time to come few men will be thought to have had so positive an influence on our careers as physicians as our Professor of Therapeutics and Materia Medica, Garth W. Boericke.

To Dr. Klain we are indebted for a well presented course in Physiotherapy, a branch of medicine that is growing more useful everyday. Knowledge of this important field will be valuable in treating certain types of war injuries, and with it will be remembered Dr. Klain's patience and understanding in acquainting us with the principles of long and short wave diathermy, the alpine lamp, whirlpool baths, and the electrocoagulation of a tenderloin steak.

"It hasn't been so long since I was sitting on the benches, and I know just how yuh feel; a . . . a . . . a, getting back to the New York Group's work, a . . . a . . . , by the way, in that last prescription I gave you, change the vehicle to syrup of orange, they really go for it in a big way, all rightee." If at times it seemed hard for us to keep up with Dr. Seidel's intellectual center of gravity, we were kept awake by his genial enthusiasm and were impressed by his fair-mindedness and whole-hearted efforts to make available to us certain by-paths from his vast field of experience in pharmacology as applied to therapeutics. Never will we forget to have the patient come back while there is yet a fluid drachm or two left in the bottle.

We were extremely fortunate in having our course with Dr. Mattern prior to his leaving to join the armed forces as a Captain in the United States Army. Acknowledged as one of the ten best homeopathic prescribers in the state of Pennsylvania, Dr. Mattern had a different facial expression for each symptom; extra long pauses over certain syllables served to impress upon us the modalities of each drug.

DR. RUSSELL K. MATTERN

DR. RAYMOND SEIDEL

PREVENTIVE MEDICINE

HUNTER S. COOK, B.S., M.D.
*Professor and Head of the Department of
Bacteriology, Preventive Medicine and
Public Health*

DEPARTMENT STAFF: I. Gratch; D. de Rivas; O. Barthmaier; J. A. Hornell.

Our class was the last, at least for some time to come, to have the good fortune to study Preventive Medicine under one of the most brilliant men in the field of Immunology, Dr. Grant O. Favorite. From the sophomore year when he gave us the earliest principles of prophylaxis up until the time of his departure he presented the material in a clear and almost unbelievably simple manner. Truly his name bespeaks his place in our hearts.

During our junior year we received instructions on how to build the best privies. And for the benefit of the more urban members of the class we were taken to the city disposal plants to see how civilized man handles waste matter. At the Philadelphia water supply station we witnessed magic that could have made even Houdini take notice. The India ink of the Schuylkill was changed into clear and palatable drinking water in seven easy steps.

DR. DAMASO deRIVAS

With the beginning of our senior year Dr. Hunter S. Cook was appointed new head of the department. Despite his many other duties he very capably carried us through a series of lectures on the control of specific diseases. It was under his able guidance that we completed our course in Preventive Medicine. He was especially anxious that we should have a good foundation in War Medicine and in particular the Tropical Diseases. He was instrumental in bringing in men in various branches of Public Health, Disease Control, Maternal Mortality, etc. to lecture to us in their specialized fields.

The lectures on Tropical Diseases were given by Dr. de Rivas, a former member of the Pasteur Institute. Though at times he was difficult to understand, and on occasion he took for granted that we already knew the details of the subject, yet in a period of a few weeks we realized the genuine basis for his reputation in the field of Tropical Medicine. Dr. Gratch was one of the backbones of the department who filled in whenever necessary. Many of us were thankful for premedical German courses when we walked to Dr. Brieger's class. He taught us everything from "carbone monoxide" poisoning to how to apply for compensation.

DR. GRANT O. FAVORITE

DR. I. GRATCH

DR. HEINRICH BRIEGER

ONCOLOGY

STANLEY P. REIMANN, A.B., M.D., Sc.D., F.A.C.P.
*Professor and Head of the Department
 of Oncology*

DEPARTMENT STAFF: H. Russell Fisher; J. S. Lehman; N.
 V. Ludwick.

Upon entering our senior year we met many new members of the faculty, and chief among these from an oratorical standpoint was Dr. Stanley P. Reimann. We had often heard of Hahnemann being the only medical college with a department of Oncology, and soon discovered that it was also unique in that it had its own Philosophy Department as well. Somehow we feel that the two must of necessity go together for the field of malignancy provides much food for thought when the matter of prognosis is brought up. Although his specialty showed a mortality rate higher than any other, Dr. Reimann met the challenge, and instilled into our minds the great necessity of early diagnosis in any form of cancer. We can truly say that we are "cancer conscious", which is probably the most golden nugget to be gained in the therapy of abnormal growth.

In the weekly tumor clinics we had the opportunity of seeing various members of the hospital staff examine, discuss, and diagnose patients who presented evidence of malignancy. Dr. Lehman often astounded the audience with a harmless looking shadow just two centimeters in diameter with a density so like that of the rest of the film that only he could point out its boundaries. Invariably the post-mortem confirmed his findings.

DR. J. STAUFFER LEHMAN

DERMATOLOGY

Your teacher and professor, Dr. Ralph Bernstein, would not wish to have final mention here, for you will hear from him frequently through the pages of the "Hahnemannian Monthly". Who could forget the shovel, or the rope, or the Lancaster County special awarded for skill above and beyond the call of duty in throwing the bull? All these plus a keen sense of shady humor answered the eternal cry of the student, "For heaven's sake, amuse me", and have made Dr. Bernstein a legend in his own lifetime. The department would be far from complete were it not for the few real skin cases presented by Dr. Wittman. Actually we learned so little about dermatology, and so much about Bernstein's Hair Tonic that we are sure of graduating one of the most hairless classes in history. His arsenal of weapons keeps even "V.K." unquote away from his door.

RALPH BERNSTEIN, M.D., F.A.C.P.
*Professor and Head of the Department
of Dermatology*

DEPARTMENT STAFF: R. Bernstein; P. C. Wittman; H. E. Twining.

DR. ROWLAND RICKETTS

DR. ALFONSO L. PIERRO

DR. LESTER L. BOWER

GASTROENTEROLOGY

Our best insight to modern concepts of Gastrointestinal Diseases was gained through the scholarly presentation of a few clinical cases by Dr. Ricketts in the senior sub-sections. It was a rare privilege to learn under a man who really knows his subject and who at the same time has the ability to put it across in a systematic, logical manner. Dr. Rickett's concise outlines on the treatment of acute massive hemorrhage and on the feeding of the ulcer patient will serve us well in time to come. We still remember his brilliant lectures on neuro-anatomy in the freshman year. Before each of these lectures he was accustomed to spending six or eight hours in arranging the material in such a way as to enable us to get some idea of this vast subject in the short period of time allotted to it. Respected and admired by colleagues and students alike, Dr. Ricketts has impressed us by his sincerity and earnestness in whatever he undertakes to do. More men of his ability, sterling qualities and faith in the validity of truth as an inspiration for human betterment in our time are a "must" if high standards of medical education are to be maintained.

DR. HARRY M. EBERHARD
*Professor and Head of the
Department of
Gastroenterology*

DEPARTMENT STAFF: G. Lorenz; R. Ricketts; L. L. Bower; D. De Rivas; J. F. Tompkins; J. S. Hepburn; I. J. Wessel; I. Gratch; S. A. Dingee; W. S. Silverman; J. B. Conwell; A. L. Pierro; W. J. Walker; W. C. Gerhart.

RESIDENTS AND INTERNES

We elect Institute

President

ROBERT F. J. GREENE

This Year, as in previous years, meetings of the Student Institute have been concerned largely with student attitudes at Hahnemann. This is as it should be and subserves a very definite function. However, it has seemed that the Institute's activities have been largely means in themselves which lacked a well defined end. Proper cooperation and understanding between its members, student body, and administration was sought for in an effort to bring about a better understanding between the students and the administration in order to achieve some degree of esprit de corps.

Many problems and projects arose during the past year. Some of these were successfully completed—others were left to rot by the road side for at times conditions presented themselves which made it an impossibility to carry them out. However, in the main, the Institute did maintain its place as the pace-setter of student affairs at Hahnemann.

SURGICAL SOCIETY

It is related that Daniel Webster and Rufus Choote were once opposing counsels in a lawsuit concerning an alleged infringement on a patent right on locomotive wheels. The wheels were before the jury. Rufus Choote, as counsel for the defendant, expended his legal acumen in a learned and labored mathematical essay, intending to prove that there was an essential difference between the wheels in evidence and therefore no infringement on the patent right. Then Webster spoke for the plaintiff. "Gentlemen of the jury," said he. "You have just heard an elaborate scientific disquisition upon these wheels. I have nothing of this kind to offer. There are the wheels, look at them." The jury looked at them and gave him the verdict.

We too have no elaborate essay to give. If you ask what eonium we bestow on our own William B. Van Lennep, we would reply, "Be-

hold the man. Behold his work, his results, his reputation. His achievements speak louder than our words could possibly speak."

The Van Lennep Surgical Society originated with an eclectic group of seniors of the Class of 1934. These men duly honored the insuperable surgeon, teacher, and executive, William B. Van Lennep, by taking his name for their society.

The society was composed of fourth year men whose incipient surgical interests predicated its foundation. Every year since then, twenty men with similar interests have been chosen to fraternize at regular monthly meetings with leading contemporary surgeons to garner a not infrequent surgical nugget. Active participation by these members in meetings, other than those with professional guests in attendance, takes the form of presentation of theses based on surgical themes.

PAXSON OBSTET

OFFICERS

President.....FRANK O. NAGLE

Secretary-Treasurer.....JOSEPH M. SCORNAVACCHI

The Paxson Obstetrical Society is one of the newer groups at Hahnemann, having been organized in October of 1941. At this time thirteen men gathered together for the purpose of enriching their studies in the field of Obstetrics. Since then the society has grown considerably, and today it numbers twenty-nine members.

TRICAL SOCIETY

Through the efforts of our friend and sponsor, Dr. Newlin F. Paxson, the society has been very fortunate in having as guest speakers outstanding men in the field of Obstetrics, not only from our own school, but from others as well. One of the activities of the society is to visit the Obstetrical Department of other hospitals. In the past year the society has visited the Margaret Hague Maternity Hospital, the Philadelphia Lying-In Hospital, the Jefferson Hospital, and the University of Pennsylvania Hospital.

The year began with a visit to a Maternal Mortality Committee meeting. Dr. Warren C. Mercer spoke at the second meeting and gave us a fascinating discourse based upon the vast experiences encountered during his many years of practice. One of our last meetings was held at the Union League at which time we were guests of Dr. and Mrs. Paxson.

MEDIC MAKERS OF 1945

Working under the most dire circumstances ever imposed upon a staff, by virtue of the stringent attendance rules and rigid military regulations, we have produced the first totally extracurricular *Medic* ever published at Hahnemann. Endless hours been devoted to making a yearbook which is a genuine picture of our days in medical school as well as a true expression of our feelings as we join the ranks of alumni.

Unlike the gilt-edged, glorified catalog-institution so enticingly developed by clever writings, we have dipped our pens in the bitter wells of reality and in subtle simplicity arrived at a genuine memoir of conditions at Hahnemann as only the student can see them. Much careful research was required to provide as factual and authentic an account as possible.

We make no pretentious boasts as to the quality of our book. No laurels are desired. We merely leave it as a record of our stay, that in the days of the Greater Hahnemann it might be looked upon as an era in which progress gave way to individuality.

THE STAFF

Our sincere appreciation to Dr. Harold A. Taggart for his able and helpful advice.

DEDICATED TO

Earl B. Craig

Dr. Earl Burrell Craig was educated in the schools of Philadelphia. He graduated from Hahnemann Medical College in 1906 and from Jefferson Medical College in 1908. He also did post-graduate work in Vienna, Paris and London. He was a member of the Philadelphia County Medical Society, the State Homeopathic Medical Society, the American Institute of Homeopathy and the Philadelphia Obstetrical Society. He was also a Diplomate of the American Board of Obstetrics and Gynecology, a Fellow of the American Medical Association, the American College of Surgeons, and the International College of Surgeons (Geneva).

Since 1930 Dr. Craig had been Professor and Head of the Department of Gynecology at Hahnemann Medical College and Hospital. He was a member of the Executive Council of the College and Hospital. Dr. Craig was also a member of the Union League. He was Consulting Gynecologist to the Allentown State Hospital.

E. C. Hessert

THE MEMORY OF

The death of Leon Thomas Ashcraft, B.S., A.M., M.D., F.A.C.S., marks the passing of one of Hahnemann Medical College's most distinguished alumni. A member of the Class of 1890, he had attained at the time of his death the distinction of having spent fifty-five years of his life in active medical practice. The last forty years of this time were devoted to teaching his specialty at the Hahnemann Medical College and Hospital beside carrying on an extensive private practice.

Dr. Ashcraft was born in Philadelphia, November 4th, 1866. He attended Dickinson College, Carlisle, Pennsylvania, before matriculating at the Hahnemann Medical College. During his long association with Hahnemann, he was Professor of Genito-Urinary Diseases and Surgeon to the Hahnemann Hospital as well as to a number of other hospitals. He was an outstanding representative of his specialty; an able surgeon and a popular, inspiring teacher. His many colleagues and students will remember him for his pleasing personality; his gentlemanly demeanor and his scholarly attainments. Hahnemann has lost a loyal friend and a distinguished alumnus.

not yet completed but each of us hope that by June 14th we can sum up our glorious days at Hahnemann with the famous words of Caesar—"I came, I saw, I conquered".

COLLEGE CHARACTERS

FEATURES

A SEQUEL TO DRYDEN'S MCFLECKNOE

In all the realm of nonsense absolute
Only two before have been so mute.
To knowledge, that they chose to rule
And express their qualities as a fool.
These two we learn from history's pages,
Were those most demented sages
Called Shadwell and McFlecknoe by name,
Who owe to stupidity their fame.
Shadwell succeeded McFlecknoe's realm
And has, till now, been at the helm.
But Shadwell tires, and asks each must
To assemble together in order to choose
The most stupid dunce in all creation
To succeed him at his abdication.
Who shall this new ruler be
So schooled in the arts of naivete,
That he can reign with open hand
And be undisputed throughout the land?
He must from the south, the muses say,
For in dullness, still, the south holds sway
From all those rebels we shall pick
One who is most unbelievably thick,
His mind must be as virgin to thought
As anything that God has wrought.
No mental process must have transpired
His cerebrum. Nor must he ever have been fired
With even a desire to think,
Upon imbecility he must brink.

* * * * *

After years of searching the country bare,
The new king has been found. ***

B. S. BROWN

Whatever happened to "Doc's" bedside manner?

They had called Jim "Doc" from his short-pants days, because all his friends and family knew that he planned to follow in the footsteps of his grandfather and favorite uncle—and become a doctor.

But Jim is not a doctor. His medical education has never started, his Bedside Manner has never been tried out. Like so many dreams and ambitions of gentler days, they have been shoved aside by the harsh demands of war.

There are thousands of young men whose medical careers have been pushed years into the future. Every year since the war began, fewer and fewer new doctors have been produced. At the beginning of this year, military requirements cut in half the number of students permitted admission in medical or pre-medical courses.

This is one reason why there not only is a serious doctor shortage now, but why that shortage will last long beyond the firing of the last shot.

There are other reasons. Bringing troops back from all over the world will be a long, difficult task—and their doctors will be among the last to be released. Many doctors will stay abroad to prevent epidemics that might eventually come to us. Doctors who do get back will have much of

their time occupied in caring for casualties of the world's greatest war.

The very best way to save your doctor's time is to make use of his services the minute trouble arises. Never indulge in self-diagnosis. See your doctor early, in time for him to head off more serious trouble. And you can help him further by doing these three things:

Go to him—whenever you are able. House visits take time when someone else may need him urgently.

Keep your appointment promptly; make it at his convenience so that he can plan his crowded hours better.

Follow his advice to the letter—so that your trouble doesn't drag on get complicated, or need extra attention.

One of a series of messages published as a public service by Wyeth Incorporated, Philadelphia . . . relied upon by your physician and druggist for pharmaceuticals, nutritional products, and biologicals—including penicillin and blood plasma.

Why MEAD JOHNSON & COMPANY
COOPERATES WITH THE COUNCIL

Voluntarily, we market only Council-Accepted products because we have faith in the principles for which the Council on Pharmacy and Chemistry (and the Council on Foods and Nutrition of the American Medical Association) stand.

We have witnessed the three decades during which the Council on Pharmacy and Chemistry has brought order out of chaos in the pharmaceutical field. For over thirty years it has stood—alone and unafraid—between the medical profession and unprincipled makers of proprietary preparations.

The Councils verify the composition and analysis of products, and substantiate the claims of manufacturers. By standardizing nomenclature and disapproving therapeutically suggestive trade names, they discourage shotgun therapy and self-medication. They are the only bodies representing the medical profession that check inaccurate and unwarranted claims on circulars and advertising as well as on packages and labels.

The Council on Pharmacy and Chemistry, through N. N. R. and in other ways, augments the work of the U. S. Pharmacopeia, testing and evaluating scores of new products which appear during the 10-year interim between Pharmacopoeial revisions.

We are conscious of the fact that these A. M. A. Councils have at all times been criticized both in and out of the medical profession. We hold no brief for perfection in any human agency. But we subscribe to the fact that the work of the Councils is sound in principle; and in this high-pressure day and age, we shudder to think of a return to the unrestrained patent-medicine-quack-nostrum conditions of three decades ago, when there was chaos instead of Council.

A Distinctive Yearbook . . .

is the product of the efforts of a capable editor plus the interested cooperation of a seasoned specialist. To an editor, who wishes to make a success of his first publishing venture, specialization offers innumerable advantages that are most helpful—in fact—indispensable.

It is advisable to have a specialist handle your yearbook. Investigate the services of "Campus," an organization whose entire business is college and school publications.

To the Members of the Class of 1945:

On behalf of your more than twenty-five hundred fellow alumni and alumnae, it is my privilege and pleasure to welcome you into their fellowship.

Despite the fact that you have been the first class to complete your four academic years in the short space of three calendar years, those of us whose privilege it has been to observe you at first hand know that there are many among you who have become imbued with a deep and permanent loyalty to your Alma Mater and that no matter where you may be taken in Army, Navy or civilian practice, you will bring honor and glory to your College.

That this pride may ever be a lasting and mutual one is our wish to you, our youngest Alumni, upon this your departure from scholastic halls.

Most sincerely yours,
CARL C. FISCHER, M.D.
Executive Secretary

. . . and then . . . our saga ends
